## A P R E S E N T A Ç Ã O

As bibliografias de tesouros já publicadas cobrem sobretudo os tesouros de diversas áreas e não a literatura produzida sobre o assunto.

O Instituto Brasileiro de Informação em Ciência e Tecnologia – IBICT ao incluir na presente obra, além dos tesouros propriamente ditos, a literatura gerada a nível nacional e internacional sobre tesouros, objetiva contribuir para o aperfeiçoamento das metodologias de tratamento da informação, através da divulgação de linguagens documentárias, e criar um instrumento para a atualização dos conhecimentos dos especialistas de informação sobre a área.

Parte considerável dos documentos citados nesta bibliografia consta do acervo da biblioteca do Centro de Informação em Ciência da Informação do IBICT, que se coloca à disposição dos interessados.

A publicação de “Tesauros, bibliografia 1970/1982 – Thesauri, bibliography 1970/1982” constitui certamente uma parcela de contribuição para o desenvolvimento dos serviços de informação, num dos aspectos fundamentais para a recuperação da informação: a terminologia controlada.

## *FOREWORD*

*The bibliographies of thesauri already published cover mainly thesauri of different fields of knowledge and not the literature concerning to the topic.*

*The Instituto Brasileiro de Informação em Ciência e Tecnologia (Brazilian Institute of Information on Science and Technology) – IBICT has included in this publication not only thesauri themselves, but also the national and international literature about them. This effort was done to contribute to the methodology of the information treatment through the documentary languages dissemination, in order to create a tool for update knowledge of the information specialists.*

*Some of the documents cited in this bibliography are in the library collection of the Information Center of Information Science of IBICT, which is open for requests.*

*By publishing “Tesauros, bibliografia 1970/1982 – Thesauri, bibliography 1970/1982” IBICT has certainly given an important contribution to the development of the information services by strengthening one of the fundamental aspects of the information retrieval process: controlled terminology.*

*Yone Sepulveda Chastinet  
Director of IBICT*

*Agradecemos à equipe do CCI pelo apoio incondicional, a Helena Braga, Lais da Boa Morte e Maria Angélica Rodrigues Quemel pelas sugestões e, em especial, à Professora Cordélia Robalinho Cavalcanti, pela contribuição valiosa e orientação segura.*

*Acknowledges to the staff of CCI, to Helena Braga, Lais da Boa Morte and Maria Angélica Rodrigues Quemel for the professional support and suggestions given, and especially to Professor Cordélia Robalinho Cavalcanti for her contribution and orientation.*

## **NOTAS EXPLICATIVAS**

Para facilitar a consulta, a Bibliografia está estruturada de acordo com as seguintes categorias:

### **PARTE 1**

- Aspectos gerais: aspectos históricos e conceituais, filosofia, análise comparativa e definições.
- Padronização: regras, normas e diretrizes para a construção de tesouros.
- Construção e uso: concepção, técnicas de elaboração, metodologia, formas de apresentação, estudos terminológicos e lingüísticos.
- Automação: utilização de computadores nas etapas de construção e na recuperação da informação através de uso de tesouros e descrição de sistemas automáticos.

### **PARTE 2**

- Politemáticos: tesouros que cobrem várias áreas do conhecimento.
- Especializados: tesouros que cobrem determinadas áreas do conhecimento.

### **PARTE 3**

- Descrição e análise: estudos e avaliações de tesouros existentes.
- Bibliografias.
- Clearinghouse.

### **PARTE 4**

- Índices: autor individual, autor corporativo, título, assunto.

Os tesouros especializados são classificados de acordo com a Lista de Macrodescritores do Instituto Brasileiro de Informação em Ciência e Tecnologia – IBCT:

- Ciências de Apoio: Filosofia, Ciéncia da Ciéncia, Lógica, Matemática, Estatística, Ciéncia da Computação, Ciéncia da Informação, Arquivologia, Museologia, Comunicação, Sistemologia, Pesquisa Operacional, Administração, Pesquisa, Normalização, Marketing, Instrumentação, Metrologia e Patentes.
- Ciéncias Físicas: Física, Química e Cristalografia.
- Ciéncias da Terra e do Espaço: Astronomia, Astrofísica, Pesquisa Espacial, Geodésia, Cartografia, Geofísica, Geologia, Paleontologia, Pedologia, Geografia, Hidrologia, Oceanografia, Meteorologia, Aeronomia e Climatologia.
- Ciéncias Biológicas: Biologia, Ecologia, Biologia Humana, Botânica e Zoologia.
- Agricultura e Veterinária.
- Meio Ambiente e Recursos Naturais.
- Ciéncias Médicas: Medicina, Farmacologia, Ciéncias Paramédicas e Odontologia.
- Ciéncias Sociais: História, Antropologia Cultural, Indigenismo, Sociologia, Demografia, Psicologia, Direito, Política, Administração Pública, Economia, Finanças, Trabalho, Indústria, Serviços, Educação, Previdência e Assisténcia Social, Habitação e Alimentação.

- Tecnologia: Engenharia, Mineração, Tecnologia da Energia, Bioengenharia, Biotecnologia, Tecnologia Industrial, Arquitetura e Urbanismo.

Quando um documento aborda mais de um aspecto, o enfoque maior determina a categoria na qual é classificado. Os outros aspectos são recuperados pelo índice de assunto.

A Bibliografia apresenta quatro índices: de autor individual, autor corporativo, título de tesouro e de assunto. O índice de título foi incluído porque alguns dos mais conhecidos tesouros, principalmente os de instituições internacionais, são identificados pelos seus títulos.

Os descritores do índice de assunto são baseados nos títulos e nos resumos dos documentos. Por se tratar de uma bibliografia de tesouros, a palavra “tesouro” não aparece como descritor, exceto quando composto como, por exemplo, tesouro multilingüe.

As entradas das referências bibliográficas dos tesouros politemáticos e especializados são dadas pelo compilador ou pela instituição responsável.

Quando um tesouro tem mais de uma edição é referenciada a última sendo as mais antigas incluídas em notas especiais. As traduções de um mesmo tesouro possuem referências específicas.

## **EXPLANATORY NOTES**

In order to facilitate the research, the Bibliography is arranged in the following categories:

### **PART 1**

- General aspects: conceptual and historical aspects, phylosophy, comparative analysis and definitions.
- Standardizations: rules, norms and guidelines for thesaurus construction.
- Construction and use: conception, elaboration, techniques, methodology, forms of presentation, taxonomy and language studies.
- Automation: computer use in the construction stages and in information retrieval through thesaurus and automatic systems descriptions.

### **PART 2**

- Polythematics: thesauri that cover several fields of knowledge.
- Specialized: thesauri that cover only given fields of knowledge.

### **PART 3**

- Description and analysis: studies and evaluations of existing thesauri.
- Bibliographies.
- Clearinghouse.

### **PART 4**

- Indexes: personal author, corporate author, title and subject.

The specialized thesauri are classified according to Macrodescriptors List of Instituto Brasileiro de Informação em Ciência e Tecnologia – IBICT:

● Supporting Sciences: Philosophy, Science of Science, Logic, Mathematics, Statistics, Computer Science, Information Science, Archivology, Museology, Communications, Systemology, Operational Research, Administration, Research, Standardization, Marketing, Instrumentation, Metrology and Patents.

● Physical Sciences: Physics, Chemistry and Crystallography.

● Space and Earth Sciences: Astronomy, Astrophysics, Space Research, Geodesy, Cartography, Geology, Paleontology, Pedology, Geography, Hydrology, Oceanography, Meteorology, Aeronomy and Climatology.

● Biological Sciences: Biology, Ecology, Human Biology, Botany and Zoology.

● Agriculture and Veterinary.

● Environmental Sciences, Natural Resources.

● Medical Sciences: Medicine, Pharmacology, Paramedical Science and Dentistry.

● Social Sciences: History, Cultural Anthropology, Indianism, Sociology, Demography, Psychology, Law, Political Science, Public Administration, Economy, Finances, Labor, Industry, Services, Education, Social Welfare, Housing and Food.

- Technology: Engineering, Mining, Energy Technology, Bioengineering, Biotechnology, Industrial Technology, Architecture and Urbanism.

When a document deals with more than one aspect, the main focus will be determined by the category in which it was classified. The other aspects will be retrieved by the subject index.

The Bibliography has four indexes: individual author, corporate author, thesaurus titles and subject. The title index is included for some of the most known thesauri are identified by their titles, especially those from international institutions.

The subject index descriptors are established based on the titles and abstracts taken from the documents. Since this a thesaurus bibliography, the word "thesaurus" does not appear as a descriptor except when this descriptor appears as a compound, i.e., multilingual thesauri.

Polythematics and specialized thesauri bibliographic references entries are carried out by the compiler or by the authorized institution.

When the thesaurus has more than one edition, the latest one is taken for reference and the others are included as special notes. Translations of the some thesaurus have specific references.

In: PROCEEDINGS of the international symposium: "UDC in relation to other indexing languages". Herceg Novi, Yugoslavia, 1971. Beograd, Yugoslavia, Yugoslavia Center for Technical and Scientific Documentation, 1975. p. 1-24.

0009

DAHLBERG, Ingetraut. Committee for classification and Thesaurus Research (KTF). Report for 1973-1974. Nachr. Dok., 26(1): 27-32, 1975.

List of the members of this committee of the German Documentation Society existing since 1965, and reports about the topics and 11 papers discussed in the three meetings of 1973-1974. The cooperation of KTF-members in other relevant bodies is indicated and publications on the KTF and the KTF-papers are listed, mainly on the theory of relations (syntagmatic and paradigmatic ones).

0010

DAHLBERG, Ingetraut. Toward establishment of compatibility between indexing languages. Int. Classif., 8 (2): 86-91, 1981.

Outlines previous work done in the field of compatibility between indexing languages (IL), and describes the scope, limitations and advantages of establishing compatibility between IL. Suggests methods for verbal comparisons between IL as well as generation of an alphabetical comparison matrix M1. Conceptual comparisons, however, demand a conceptual reorganization of M1 into a compatibility matrix M2 with its two alternatives, namely a system-related matrix M3 and a hierarchical

matrix M4. In conclusion, the use of a compatibility matrix and organizational problems are described.

0011

DAHLBERG, Ingetraut. Workshop on "Qualitative evaluation of thesauri". Int. Classif., 4(1):40-1, 1977.

Report on the results of a Workshop of the Commission of the European Communities held on Jan. 13-14, 1977 in Luxembourg considering (1) a report by G. Van Slype on essential characteristics and evaluation criteria of mono- and multilingual thesauri, (2) the Unesco Guidelines for Multilingual Thesauri, (3) a permanent inventory of thesauri, (4) possible research efforts in this area.

0012

DAVID, A. Symposium international sur les thésaurus multilingues. Berlin, 8-10 Oct. 1973. Documentaliste, 11 (1):41-2, 1974.

0014

FILL, Karl. Dezimalklassifikation und thesauri (The Universal Decimal Classification and thesauri). DK-Mitteilungen, 19(2-3): 5-10, Mar./May 75.

Compares UDC with thesauri, concluding that for classification and documentation purposes a combination of the two would be ideal.

0015

FOSKETT, Douglas John. Thesaurus. In: ENCYCLOPEDIA of Library and Information Science, v.30. New York, M. Dekker, c1980. p. 416-63.

0016

FUGMANN, Robert. The glamour and the misery of the thesaurus approach. Int. Classif., 1(2):76-86, Nov. 1974.

If any important natural - language term which a documentalist encounters

20

in storing literature and in phrasing enquiries is admitted as an addition to a thesaurus, then the thesaurus will soon exceed the limits of its operancy and will increasingly fail to serve the purpose of an efficient device for reliable terminological control in the input and retrieval stage. The continuous decline can effectively be counteracted by conceptual analysis of candidate terms and by resynthesis of the terms of their conceptual constituents. This suggests a balanced combination of the thesaurus and the analytic-synthetic classification approach, particularly in large information retrieval systems. The representation of certain, predominantly syntactical relations, however, exceeds the capabilities of both approaches. These relations can be managed by two different devices described, namely by a clearly defined set of relation indicators and by an optionally additional graphical representation of extended concept relations.

0017

GAUDENZI, N. Tesauro: antico termine per uno strumento moderno della documentazione. Boll. Inform. Doc., Italia, 13:13-22, 1974.

0018

GAVRYCK, J. A. Teaching concept identification through the use of the thesaurus of ERIC descriptors. Online, 4(1):31-4, Jan. 1980.

Initially ERIC was chosen as the teaching data base of the State University of New York Albany School of Library and Information Science because of low cost and for the clarity and completeness of the indexing. Students must be aware of the complexity of the interview process; subsequent selection of index terms requires a cognition capable of instant morphological analysis and language reconstruction from slender clues. Discusses possible ERIC exercises which help students in search analysis. ERIC is particularly responsive to users in providing new additions to the thesaurus.

0019

GENDLINA, I. E. Ob usovershenstvovanii alfavitno - predmetnogo ukazatelya k UDC (The enhancement of the alphabetical subject index to the UDC) Nauch.-Tekh. Inf., Ser. 1, 8:18-20, 1977.

A review of the structure and contents of the alphabetical subject index (ASI) to a UDC-thesaurus-a classification tool of a new type based on the UDC. The scheme has 2 parts: systematic tables containing UDC notation, and an alphabetical section having some characteristics of the alphabetical part of a thesaurus, and expressing semantic relationship between terms. In an information system based on UDC a strictly structured ASI can fulfil functions usually attributed to a thesaurus. The need for a more comprehensive and visual representation of the relations between synonyms in the ASI is stressed. Experience in compiling indexes to UDC-thesauri can be used when preparing ASI for other UDC publications.

0020

GILCHRIST, Alan. Role of thesauri in mechanized systems. In: INDEXERS on indexing. New York, R. R. Bowker, 1978. p. 381-89.

There is a long history of research and development of thesaurus-type tools for various purposes including information retrieval, but vastly more money has been spent far more recently on mechanized information retrieval. This paper lightly reviews thesauri and mechanized systems and concludes with some observations about this apparent imbalance and the need for deeper thinking about concept formation and relationships, and more imaginative use of computers.

0021

GILCHRIST, Alan. The thesaurus in retrieval. London, ASLIB, 1971. 184p.

0022

GORKINA, N.S. & KRAVCENKO, N.D. The Use of the terms "classification" and "thesaurus". Automatic Documentation & Math. Linguistics, 8(4):33-8, 1974. Em russo.

0023

GOROL, A. et alii. An attempt to unify the classification of documents according to the Universal Decimal Classification System by adjusting its symbols to the descriptors of the thesaurus. Aktual. Probl. Inform i Dok., 20(3):3-11, 1975. Em polones.

The descriptors of a thesaurus of non-ferrous metals were reconciled with the UDC (given UDC-notations). In the majority of the 3543 cases descriptors were found to correspond to the UDC-numbers, in a certain number of cases, two or three UDC-numbers had to be composed. These were marked for non-use in classification.

0024

GREAVES, Monica A. A comparative study of verbal subject data in information retrieval systems in education. Educ. Libr. Bull., 21(2):1-19, Summer 1978.

Examines the differences between terms used in the computerised education information retrieval systems operated by the British National Bibliography (PRECIS), Educational Resources Information Center, European Documentation and Information System for Education, and Unesco/International Bureau of Education. The differences, those which appear to be arbitrary, those based on national differences, and those related to the operation of the retrieval system, are discussed. Differences, and those related to the operation of the retrieval system, are discussed. Differences in the application of the terms to documents are demonstrated. Summarises problems which might arise in standardising the terms in all the systems. Too rigid standardisation might hinder progress in the development of more efficient subject access in education.

0025

GUHA, B. Thesaurus in indexing. In: Documentation and information. Calcutta, The World Press Private, c1978. p. 178-200.

0026

HARRIS, Brian. On the translation of classification instruments. T.A. Informations, 19(2):57-67, 1978.

The use of classification systems entails several types of translation: (1) translating between 2 classification systems e.g. from LC to ERIC descriptors; (2) translating the working instruments of a classification system (typically a thesaurus or the index to a schedule) from one natural language to another e.g. translating an edition of the UDC from German to English. Some typical examples are considered in the light of contemporary translation theory and are classified according to Ljudskanov's taxonomy of translation types. The particular problem of translating a thesaurus is discussed with reference to work by Beling et al and by Digger. The thesaurus translator has to deal not with individual descriptors but with structured sets of them: an equivalence class in language A must be translated by an equivalence class in language B.

0031

KENT, Allen. Unsolvable problems in information science. Probl. Inf. Doc. 8(4):262-81, 1974. Em romeo.

'Unsolved' problems include: semantics, thesauri, indexing, vocabulary

control, relevance and significance.

0032

KIRKMAN, J. et alii. Controlled English in international documentation. In: FID. Congresso. 39., University of Edinburgh, 1978. New trends in documentation and information: proceedings. London, Aslib, 1980. p. 70-6. (FID Publication, n. 566).

Controlled English could save many translation costs if it were used in international technical documentation. Controlled English has a limited vocabulary and a simplified syntax. Describes the Controlled English Project at University of Wales Institute of Science and Technology where a version is being developed for L.M. Ericsson. The core vocabulary is a single alphabetical list of Ericsson English and 'forbidden' words. The Writer's Guide helps writers to produce short simple sentences.

0033

KOFNOVEC, Ladislav, & SIMANDL, Dusan. Selekcni jazyky: soucasny stav a perspektivy pouzivani v cs. informaci soustave. (Information retrieval languages: the present state and prospects for their use in the Czechoslovak information system). Ceskoslovenska Informatika, 18(3):82-6, 1976.

Analysis of present trends shows a tendency in information practice to abandon universal retrieval languages, such as traditional classification schemes, in favour of specialised retrieval languages, especially of the descriptor type. It is difficult to determine future development, but as far as the traditional retrieval languages are concerned they will still be used in the case of multidisciplinary collections and in small information units where it is not economical to use automated means of information retrieval. Generally speaking, in the 1980s, subject headings, classification systems, and descriptor languages (thesauri for one subject or branch of industry and those of a multidisciplinary type) will still be in use. The usefulness of a 'linking' language as the basis of mu-

tually compatible languages for international information systems is also discussed. Recommendations concerning the internal organisation of the Czechoslovak information system and the perspectives of linking it to the International System for STI (Eastern Europe) and to UNISIST are presented.

0034

0035

KOWALEC, Maria. Co to jest tezaurus? (What is a thesaurus?) Poradnik Bibliotekarza, 32(6): 129-33, 1980.

The work thesaurus is traved from a 'storehouse for treasure' through to Roget's Thesaurus and now to a dictionary of phrases very helpful in the world of information retrieval. Discusses the arrangements and usefulness of Slownik terminologiczny informacji naukowej (Dictionary of terminology for scientific information), Tesaurus automatyczki i pomiarów (Thesaurus of automation and measurement) and Slownik tematów dla bibliografij i katalogów w ukladzie przedmiotowym (Dictionary of subjects for bibliography and catalogues in subject order).

0036

LAQUEUR, M. A. M. Thesaurus, een blij vende zaak of niet. (Thesaurus, here to stay or not?). Open, 9 (4): 199-207, Apr. 1977.

A literature review mainly covering 1970-75 publications dealing with the external aspects of the thesaurus. There is much diversity of opinion on the definition of a thesaurus, on the usefulness and the possible ways of using thesauri in documentation, and on the position of the thesaurus in relation to classification systems.

0037

LAZARESCU, G. Un instrument auxiliar in nuna de pregatire si perfectio-nare a cadrelor didactice. (An auxiliary tool for teaching staff training) Stud. Cerc. Doc., 19(1-2):91-6, Jan.-Mar./Apr., June 1977.

Discusses ways of using the Thesaurus of descriptors in education areas and in the work of individual teachers, for self-improvement.

0038

LEATHERDALE, Donald. Thesaurus interfaces in agricultural and allied fields. Quart. Bull. IAALD, 18 (3): 143-47, 1973.

Señala la naturaleza multidisciplinaria de la agricultura y por lo mismo la necesidad de usar más de un tesoro especializado en los sistemas de información agrícola. Menciona los sistemas AGRIS, el Macrotesauro de la OECD, el Canadian Agricultural Thesaurus, el IFIS thesaurus, entre otros.

0039

0040

MANECKE, Hans-Jürgen. Aufwand und Nutzen bei der Erarbeitung und anwendung von informationsrecherchesprachen (Expenditure and advantage in the compilation and application of information search languages). Informatik, 23(4):34-6, 1976.

Descriptor languages are among the search languages most frequently used at present, especially in the field of thesauri. The expressiveness of search languages is inferior to that of natural languages. Reduced expressiveness means loss of information. Minimisation of loss of information by increasing expressiveness is one of the essential objectives in the compilation and perfection of information search languages. This is why—even with due regard to subjective shortcomings in indexing—new means of increasing expressiveness should no longer be developed. What is more rational is the long-term application of 'standard' thesauri with the simultaneous elaboration of methods aimed at reducing subjectivity in indexing.

MEYRIAT, Jean. Social science information languages: a comparative analysis. Int. Classif., 7:60-5, July 1980.

Preliminary report presented at the Consultative Meeting on the Establishment of an Integrated Thesaurus of the Social Sciences, Paris, Unesco, 9-11 June 80. Report of an analysis of 60 information languages of the social sciences regarding the distribution of these languages within the social sciences. Discusses purpose and empirical method used. For each of 41 subject fields the number of terms in significant information languages are given. Makes suggestions for further investigations and for the preparation of a General Indexing Language in the social sciences.

0043

MILDNER, Horst. Zur weiteren Entwicklung von informations-recherchersprachen. (Further development of information search languages). Informatik, 23(1):31-2, 1976.

Information search languages of the classification type and the descriptor type should be used together in automated information retrieval systems. The comprehensive development of equivalence classes is very important. Each thesaurus used in a specific automated branch information system has tended to develop in isolation from those in other subject fields. These systems differ from one another not only in terminology and classification but also in the basic tasks required of them and in the nature of the information stored. The Central Institute for Information and Documentation in the GDR has recommended systematic principles for overcoming difficulties in adjusting terminology used in thesauri of

different disciplines. The use of natural language in thesauri should be developed still further.

PRESCHEL, B. M. Encyclopedia article titles as thesauri terms in indexing. In: AMERICAN SOCIETY FOR INFORMATION SCIENCE. Annual Meeting, 41. New York, NY, 1978. Information age in perspective: proceedings, Washington, ASIS, 1978. v. 15, p. 264-66.

The first step in the development of a new thesaurus for the storage and re

trieval of information is to collect and organize the terms that will be necessary for the indexing of the items to be stored and retrieved. In comparable fashion, the first step in the development of a new encyclopedia is to collect and organize a list of the articles that will be included in the encyclopedia. The list of article titles for the encyclopedia and the list of terms for the thesauri have many similarities in function and genesis.

0050

RAITT, D. I. Recall and precision devices in interactive bibliographic search and retrieval systems. Aslib Proc., 32(7-8):281-301, July/Aug. 1980.

An index language usually incorporates various methods for improving recall and/or precision while searching. Recall devices tend to increase the size of retrieved document sets, while precision devices tend to reduce them. Describes the most common devices and examines their use in several thesauri. The thesauri used relate to data bases available for searching on the European Space Agency (ESA) IRS and include the NASA Thesaurus, Thesaurus of Engineering and Scientific Terms, Thesaurus of Metallurgical Terms, Subject Headings used by the USAED, Subject Headings for Engineering, INIS Thesaurus and the INSPEC Thesaurus. Discusses use of recall and precision devices on ESA IRS.

0051

RAJAN, T. N. Dewey's relativ index-a precursor to thesaurofacet. Ann. Libr. Sci. Docum., 23(4):270-74, Dec. 1976.

Traces the development of the Relative Index in the 18 editions of the Dewey Decimal Classification (DDC). The classified and the alphabetical parts of the DDC are mutually supplementary and complementary and the index is not merely a location aid to the tables. The concept of a relative index has influenced other classification systems such as UDC, Bliss and also the Thesaurofacet of the English Electric Co. This scheme features equivalence, hierarchical and associative relationships between terms in the tradition of

the DDC. Concludes that DDC could easily be developed into a thesaurofacet, making it even more versatile.

Considers general systems theory as a basis for terminological integration and attempts to bridge the gap between thesauri and decimal classification. The megathesaurus can be seen as a standard simplified structure for ordering semantic fields, it should cover the whole of human knowledge. The megathesaurus should also offer a standard system of numerical codification. There would be a standardised number of semantic fields and levels; the megathesaurus would cover the first 2 digits with a maximum of 100 general terms. Gives some examples.

0056

SAHLI, Marilyn Sue. Terminology of the social sciences: the term "cognitive processes" in the thesauri of two discipline-based information systems. An Arbor, Michigan, University Microfilms International, 1981. 245 p.

(PhD thesis - Case Western Reserve University, Ohio). Hierarchical charts showing the arrays under the term 'cognitive processes' in the ERIC thesaurus and Thesaurus of psychological index terms demonstrate that the term appears in different hierarchies in the 2 indexing languages. 3 explanations are offered, discussed, and rejected. These results suggest the need for further similar studies.

The rapid growth of international information and the recent construction of EURONET have made harmonisation of methods and multilingual access vital. Following consideration of 10 existing suggestions, proposes the adoption of EUROTHESAUTOM, a juxtaposition of the thesauri of all the data bases linked with EURONET, in all their language versions, and semantic relations hips, and with reference to the thesaurus of origin. Cross references would be made between languages, and the existence of equivalent descriptors and associated terms notified. Such a system would be easy to construct and to update.

0069

VOORBIJ, H. Thesaurusproblematiek: definitie, terminologie en functie. (Problems of the thesaurus: definition, terminology and function). Open, 12(4):198-205, Apr. 80.

Considerable confusion surrounds the definition of the authority file and thesaurus. Library catalogues may take the form of an alphabetical author/title catalogue, an alphabetical subject catalogue using subject keywords taken from a list of subject headings, or a classified catalogue arranged in notation order of the classification scheme employed. An authority file may be

described as a list of subject headings used in an author/title or subject catalogue, with references from variant forms of headings. A thesaurus is a form of authority file for a subject catalogue. The thesaurus with its controlled vocabulary of related terms and its capability of accomodating new topics is superior to a list of subject headings and to a classification scheme as a means of subject access to a library's holdings.

INSTITUTO COLOMBIANO PARA EL FOMENTO DE LA EDUCACIÓN SUPERIOR. Directrices para el establecimiento y desarrollo de tesauros monolingües. Bogota, FID/CLA, 1980. 71 p. (Norma colombiana 1476, 1a. revisión).

Columbia's National Standard NC 1476 corresponds in content and size to ISO Standard 2788 for the establishment and development of monolingual thesauri. However, it differs from the international standard in a simpler treatment of some linguistic problems, new examples and numerous illustrations; on the whole, the standard was developed

strictly to meet the nation's needs and its level of development of STI, which is quite high at the present time. Supplements include a sample of a classified descriptor list in a graphic outline, schematic steps and methods of work in thesaurus development and maintenance, sample cards for filing keywords and descriptors (different blank forms are reserved for different purposes and work stages), and fragments of three thesauri which have been developed and used in Columbia.

CONSTRUÇÃO E USO  
CONSTRUCTION AND USE

0101

ABE, Koji. (On some problems of thesauri.) Libr. Inf. Sci., 14:71-94, 1976. Em japones.

The problems of thesauri for document retrieval have been discussed many times, and guidelines for the establishment of thesauri have already been published by Unesco and ISO. The guidelines are not full enough in the areas concerning the purpose and criteria for preferential cross-referencing between the descriptor and the non-descriptor, and for hierarchical and associative cross-referencing between descriptors. This insufficiency is due to a lack of consideration of which documents are necessary to answer a request. In these guidelines only synonymous, generic and part-whole relations between terms are mentioned as bases for preferential and hierarchical cross-references. In spite of the lack of clear description of this viewpoint in the guidelines, various existing thesauri already make cross references between terms on the basis of relations between documents. Reviewing the above-mentioned guidelines as well as examples in existing thesauri in terms of definition, selection of descriptors, cross references between terms, special procedures for generic terms, and methods of compiling thesauri, the author discusses specific problems and suggests some solutions.

0102

AITCHISON, Jean. Integration of thesauri in the social sciences. Int. Classification, 8(2):75-85, 1981.

Paper presented at the CONTA Conference, Bielefeld, 24-27 May 81. Discusses the objectives and compilation of the proposed Integrated Thesaurus of the Social Sciences, which is intended to act as a master reference tool, as an aid in searching across data bases, or a switching mechanism. The 1st step in compilation should be the merging of terms to form a Descriptor Bank. To compare the merged terms at the concept level, analysis in sub-fields is proposed within a classification fra-

mework, preferably 1 with a faceted structure, such as the 2nd edition of the Bliss Bibliographic Classification. The classification would serve as the master against which the terms from the merged information languages, arranged in a compatibility matrix, would be compared. The master classification would be modified during interaction with the matrix terms, and emerge as the Integrated Thesaurus in a format similar to that of the BSI ROOT Thesaurus, having a detailed classified display and full alphabetical section. Provides an example worked out in the sub-field of Unemployment using terms from 5 thesauri and the UDC. Also considers multilingual implications, testing and updating.

ANTOPOL'SKII, A. B. & RUDYKINA, N. G. Opijt sravnitel nogo issledovaniya otechestvennykh informatsionnopoiskoviykh tezaurusov. (Experience of comparative research into Soviet information retrieval thesauri). Nauchnye i Tekhnicheskie Biblioteki SSSR, 12:3-11, 1977.

Existing Soviet thesauri are reviewed in the light of constructing a complex of compatible retrieval languages for the State Automated System of Scientific and Technical Information. The thesauri are distinguished by: (1) width of thematic coverage; (2) degree of systematic construction; (3) closeness to natural language; (4) form of presentation; (5) translatable natural languages. Research parameters include methodical principles of construction, structure, semantic relationship, practicability, quantitative characteristics and conformity to standards. To use the work already done, a collection of these thesauri must be made,

and an information service based on them as a working model of an automated system of index languages.

ARIES, P. Preparation of a thesaurus for tropical and sub-tropical agriculture. Final report. Paris, Centre National de la Recherche Scientifique, 1973. 131 p. Em francês.

El thesauro es común a nueve organizaciones francesas en agronomía tropical. Cubre el área de suelos, agrotecnología, irrigación, drenaje, fertilizantes, biología, genética, zootecnia. Describe la metodología usada. Contiene apéndices.

0107

ARMSTRONG, C. M. & PIPER, J. R. The structuring of an associative empirical thesaurus of English. Siglash Newsletter, 8(2-3):1-7, 1975.

Description of a method for the construction of a structured thesaurus of English based on empirically measured associative links between words. For each of the 35000 English words and phrases an environment of related words can be obtained; for the 8400 stimulus words this environment is fairly large. This environment may also be clustered. Due to the network structure of the data, any word occurring in a component of an environment has its own environment structure: one can thus search in the network to an unlimited extent.

A specialized thesaurus has been devised: (1) to co-ordinate all aspects of indexing chemical compounds according to their biological effects; (2) to translate any term related to the biological activity of chemical compounds into descriptors for the input of the retrieval system, to construct information requests and predict the possibility of biological activity of new compounds; (3) to serve as a basis for the elaboration of a biological code through which the system's input and stored information on biological activity would be coded. The criterion taken was the effect of the compounds on cells, tissues, organs, systems of macro-organisms, microorganisms and plants. Describes the stages of thesaurus construction-determining the subject content, formulating the initial keyword file, construction of entries, modification, and quantitative evaluation. Details are given of the widely branching system of hierarchical relations among descriptors.

0112

AVRAMESCU, Aurel. Objective design of vocabularies and thesauri. Probleme de Informare si Documentare, 11(4):119-36, July/Aug. 1977. Em romeno e inglés.

In order to introduce quantified methods in elaborating compact information languages starting from probabilistic concepts, the author obtains useful interrelations between the main numerable parameters of any information retrieval system based on coordinate indexing, combining the number of documents accumulated and to be obtained on query, the number of descriptors in vocabulary at indexing and in query, the mean and lowest descriptor frequency, the indexing depth, etc. New characteristic indicators are deduced for objective evaluation of vo-

cabularies, including the association factor of descriptors, the system selectivity, the reduction factor depending on the number of matches. Simple relations between all these parameters allow to easily find the influence of every factor on the output efficiency of the whole system. To make computation easier two nomograms are presented, which prove to be very useful for the quantified design and testing of information systems based on specific vocabularies and thesauri.

BASOVA, I. M. Terminological control in the field of informatics; a case study of four years of working, experience with 'Informatika' reference information system. In: FID. Comitê sobre Terminologia em Informação e Documentação. Moscow, 1975. Proceedings. Moscow, All-Union Institute of Scientific and Technical Information, 1976. p. 114- 17. Em inglês.

Since 1971, a reference information system, named 'Informatika' (Informatics), has been operational at VINITI. Describes experience with a documentary descriptor information retrieval system which is one of its basic subsystems. Discusses components of the system- the information retrieval thesaurus for informatics, descriptor dictionary, indexing manual, and particularly the input dictionary, which is used for input of documents and requests. This dictionary, which is continually updated, is used after content analysis to convert the terms into the language of the controlled vocabulary, and aids the storing up of new terms as likely candidates to become descriptors. Once a term reaches a predetermined threshold of frequency, it is entered into the descriptor dictionary and thence into the thesaurus. Draws various conclusions about the compilation and operation of such a system.

(Observations on a method of applying thesaurus - like diagrams to the conceptual area of problem conditions - a contribution to the rationalisation and intensification of research). Informatik, 24(4):25-31, 1977.

Describes the principles and work stages of applying thesaurus-like diagrams to conceptual areas of problem conditions, with definitions of the initial and intermediate stages and solution of a problem. The thesaurus-like diagrams can be used as an inde-

xing framework or as a special thesaurus for the problem. This method leads to an increase in depth of information, makes possible a clear ordering of statements and queries, produces better definitions of problem aspects and makes possible the synthesis of new aspects, stimulates associative thought and creativity, acts as an enlarged associative memory for the researcher, can be easily expressed in algorithmic terms and contributes to the optimisation of collective research.

BAUER, Gerd. Rationalisierung der wissenschaftsprognose durch anwendung von thesauren und thesaurusartigen hilfsmitteln. (Rationalisation of scientific forecasting by the use of thesauri and thesaurus-like aids). Informatik, 26(1):29-33, 1979.

Most known methods of scientific forecasting are not sufficiently adapted to characteristics and trends in scientific development to yield satisfactory results. In particular the effect of semantic components on thought processes and psychological aspects of cognitive information work is hardly taken into account. There is a lack of methodical aids for facilitating the selection and classification of relevant forecasting information, especially for supporting creative activity during prognosis. A graphic method is suggested for analysis of important changes in scientific research and of forecasting terminology during information processing. Changes made to a thesaurus can be used simultaneously for forecasting, a quicker way of providing topical information than retrospective searching. The method is especially suitable for cooperative forecasting in interdisciplinary fields and assists all creative activity during forecasting.

BECK, Joanna Tomasik-. Problem ekwiwalentów terminów w tezaurusach wielojęzycznych. (Problems of term equivalences in multilingual thesauri). Akt. Probl. Inf. Dokum., 22 (5):21- 4, 1977.

In developing multilingual thesauri,

the main problem is the choice of equivalent terms in different languages. Discusses 3 types of term equivalence: total, partial and zero. Identifies difficulties found in establishing term equivalences, noting the need to overcome the problem of polysemy, homonyms and synonyms.

0120

BERKOVICH, Simon Ya. & SHNEIDERMAN. Lexical problems in large distributed information systems. Inf. Process. Manage., 16(6):259- 67, 1980.

Lexical problems are created by the need to handle many names and their interrelations. Data dictionaries do not solve the problem, being concerned with data base schema design rather than execution of operations. Introduces a lexical subsystem, a separate component in an information system architecture to deal with linguistic and control functions concerning lexical problems in local and network environments. The subsystem is an efficiently organised program package which acts as a 'linguistic filter' for lexically incorrect queries, promotes integration of data bases and information retrieval systems and facilitates creation of local information systems.

BLANDEN, R. R. & STERN, B. T. Structuring the Excerpta Medica thesaurus via a polyhierarchic decimal classification. In: EURIM II. European Conference on the Application of Research in Information Services and Libraries. Amsterdam, 1976. Proceedings. London, Aslib, 1977. p. 148-50.

Excerpta Medica maintains a thesaurus, MALIMET, and a polyhierarchical classification; each is used independently of the other. Because the thesaurus has no hierarchical structure many specific terms must be used in an 'OR' relationship when searching for broad concepts. 2 alternatives for overcoming this problem are considered: (1) adding hierarchical structure to the thesaurus-but this would involve considerable effort and increase the size and complexity of the thesaurus; (2) automatic generic posting, which would prove too costly in computer time. Instead, it has been decided to link terms in the thesaurus to one or more subcategories of the classification so that classification codes are automatically added to a record on the basis of the index terms selected. Considers the problems of linking frequently used MALIMET terms to particular classification subcategories.

BOOTH, Barbara. VIP manual: guidelines and procedures for ERIC vocabulary improvement. Washington, Educational Resources Information Center, 1978. 104 p.

This manual was development for use by ERIC personnel involved in the 2 1/2 year Vocabulary Improvement Project (VIP) which culminated in the publication of the 1980 completely revised edition of the Thesaurus of ERIC Descriptors. Based on the idea that indexing is not about description of documents but about retrieval, it applies criteria derived from the capabilities of manual and on-line retrieval to examples of thesaural problems. Project procedures and principles for vocabulary improvement are presented in the first 2 sections, by detailed discussions of the functions and treatment of main terms, scope notes, and use/use for references.

A project for compilation of a thesaurus on the building of schools was carried out in the Institut für Schulbau at Stuttgart University. An artificial language was constructed, based on the natural language on the subject but syntactically independent of it. A descriptor is an element of artificial language. All compounds were analysed into basic terms as far as possible and simple descriptors found for them. Complex descriptors, expressions of artificial language formed from simple descriptors with the aid of special syntactical links, were also used; the 3 kinds of complex descriptors-modifier head constructions, clusters and explanations-are described in detail, together with additional data for inclusion where insufficient bibliographic description occurs. Document content is divided into different themes. Thematic description can be divided into subject, aspect and mode, which are also described in detail.

ELLMANN, Dietrich. Stav a výsledky práce s tezaurami v soustavě VTI NDR. (The present state and the results of work with thesauri in the scientific and technical information system in the German Democratic Republic). Ceskoslovenská Informatika, 18(7-8):193-95, 1976.

A thesaurus in the German language has been constructed for all branches of industry in East Germany as well as for the most important disciplines in the natural sciences. 70 scientific and technical thesauri were included on the list compiled by the ZIID in early 1975. Thesauri for specialised information system should be constructed from existing ones. Compatibility of languages is the first task facing the International Scientific and Technical Information System of Eastern Europe. The importance of multilingual thesauri is clear in this context. Work on such thesauri is only just beginning in East Germany. The 2 completed multilingual thesauri are those for the international information system in

the fields of building and diesel engines. Russian-German and German-Russian are the basic versions. The specialists from each country concerned participate in the construction of multilingual thesauri, i.e., the work does not involve a mere translation of descriptors from one language to another. Some conditions of further work on the thesauri at national and international levels are stated.

0156

FEINBERG, Hilda. Mini-thesauri. New York, Pratt Institute, Graduate School of Library and Information Science, 1980. 190 p.

The first of these books sets out to show those concerned with data retrieval how to construct a thesaurus for personal use; the principles when mastered would be applicable in any subject. Indexers working in a particular field would have their own controls of language, referencing systems for the basic tasks of filing and alphabetization, and help in maintaining consistency in the face of very diverse sources. The book also offers examples of these principles practically applied, and how to update thesauri after initial construction. There is too, a useful chapter on how computers can help. Bibliographies and appendixes on British and International Standards, package programs and samples make the coverage of the subject very comprehensive. There is a useful explanatory glossary and an index. Alas, the index itself is very weak; neither alphabetization nor filing for instance have entries (though 'word by word sequence' and 'letter by letter sequence' both do), descriptors has a subheading 'numbers as, 26' but integers has 'numbering descriptors, 36'. Examples of thesauri which have been devised are found in the second publication. Mini-thesauri for subjects as diverse as opera and computers, Buddhism and business, law and astronomy are set out with a brief but useful general introduction and short bibliography.

For a practitioner in any of the fields which are illustrated in the second book it would be directly use-

ful; for anyone trying to devise a thesaurus for personal use it might also be helpful in so far as it reveals several different approaches as practically applied. Taken together the two books provide useful and practical help for today's workers in data retrieval, faced as they are with the terminological explosion, or grappling with the contemporary manifestations of pseudo-scientific gobbledegook.

0157

FIELD, B.J. A Thesaurus-based indexing and classification system developed for INSPEC products and services. Journal of Documentation, 30(1):1-17, Mar. 1974.

The development of the INSPEC vocabulary system which comprises a unified indexing and classification scheme is described together with the reasons for its adoption. The vocabulary system uses a hierarchical classification and a vocabulary development file with thesaurus structure which is linked to the classification. This file has been designed and is used as a controlled-language thesaurus and as a free-language aid in the formulation of search profiles.

FOSTER, W. R. et alii. The coordinated development of health - related clearinghouse vocabularies: a proposed technique. In: AMERICAN SOCIETY FOR INFORMATION SCIENCE. Annual Meeting, 42., Minneapolis, Minn., 1979. Information choices and policies: Proceedings. White Plains, New York, Knowledge Industry Publications for ASIS, 1979. p. 157-67.

Examination of the wide range of existing health-related data bases with some type of controlled vocabulary demonstrates that individualised vocabularies are to be avoided as these confuse users. Health and medical thesauri were examined as well as the index language requirements for cancer and diabetes. MeSH was the chief candidate for a generalised health information vocabulary. A subset of MeSH could be used by each clearinghouse. This would reduce confusion at a low cost and would include uniform quality control procedures whilst encouraging cooperation.

GERD, A. S. Eshche raz o strukture tezaurusa po biologii. (More about the structure of a thesaurus on the biology). Nauc.-Techn. Inform., Ser. 2., 10:32-3, 1976.

A basic type of thesaurus in this field is one containing Latin names of families, genera and species. This could be constructed as a dictionary of descriptors of Latin names with directions under each to all Latin synonyms. The main advantage of such a thesaurus is that it is oriented towards an international system of Latin nomenclature and is therefore independent of individual natural languages. On the basis of an analysis of Russian texts on ichthyology, examples are given of thesaurus entries for Latin names as well as for national names; sources of lexical units for a Russian thesaurus are specified. Describes a special type of thesaurus which includes both Latin names and national terms.

0166

GHOSE, A. & DHAWLE, A. S. Problems of thesaurus construction. Am. Soc. Inf. Sci. J., 28(4):211-17, July , 1977.

Revised version of a paper presented at the seminar on Thesaurus in In-

formation Systems, Bangalore, Dec. 75. Analyses the basic assumptions of the different methods of thesaurus construction from the epistemological point of view as well as from the point of view of users' information retrieval needs. The construction of thesauri for the social sciences is particularly difficult because of the inherent ambiguity of terms in this field. It is emphasised that a thesaurus should always be constructed with a class of user in mind. Since the idea of a 'growing thesaurus' is not practical, suggests that an empirical study of the semantic differences among various user groups would form an adequate basis for thesaurus construction in the social sciences.

GROHMANN, Werner & PROTZ, Armin. Zur Darstellung von Begriffsbeziehungen in Thesauri. (The representation of terminological relationships in thesauri). Informatik, 26(3):38-42 , 1979.

A new method of representing terminology relationships has been evolved for a new thesaurus on low voltage circuit technology. The theoretical basis and methods for determining ter-

minological relationships are discussed, including positions of descriptors and non-descriptors, syntactic, syntagmatic and extensional relationships. Alphabetic representation alone cannot show all relationships; a systematic arrangement showing polyhierarchical relationships is preferable. In this thesaurus the main section combines systematic and alphabetic representation; this is compared with other methods. Changes in the AIDOS OS/ES program system are needed to implement this form of representation, with electronic support for certain (currently manual) routine and control operations.

HAPARI, Mehrangiz. Dynamics of a thesaurus: a quantitative approach. Ann Arbor, Michigan, University Microforms International, 1980. 102 p. Tese PhD.

Explores the dynamic property of an information retrieval thesaurus and describes this property through the use of a quantitative method. Establishes a time-dependent model which makes use of a single-link clustering technique and a diversity measure for analysis and demonstration of the trend of changes taking place in a thesaurus over time. The clustering technique is applied to data from 4 editions of the MeSH thesaurus. The same data is used to test an alternative measure of diversity. Results indicate that thesaurus has a dynamic structure, the model used described the structure as a function of time, and there is no substantial difference in the pattern of changes reflected by a diversity measures.

0175

HENZLER, R. G. Free or controlled vocabularies: some statistical user-oriented evaluations of biomedical information systems. Int. Classif. 5(1):21- 6, Mar., 1978.

English version of a paper presented at the 'Deutscher Dokumentartag 1977', Saarbrücken. Based on CANCERNET (a literature information system, formerly called SABIR-C), a quantitative comparison of free text and controlled vocabulary used in indexing and retrieval is given. The advantages of free text search are compared with the convenience of searches using controlled vocabulary. An indexing consistency text of 683 double indexed articles is commented on. The results are evaluated with regard to loss of information from the author to the user. They show the necessity of both free text and controlled vocabulary in an optimum combination.

0181

INAUEN, J. Manuelle indexierung. (Manual indexing). Nachr./Now./Notiz., 53(6):292-308, 1977.

Paper presented at a Seminar on the methodology of documentation, held at the federal polytechnics of Zürich and Lausanne, Winter term 1976/77. Cataloguing principles are always dependent on the system available; EDP-supported

literature data banks are dependent upon their hardware and software potential. MIDONAS, the documentation system of the Eidgenossische Militärdepartement (Federal Department of Defence) in Berne is described in detail, its growth since 1970, basic concepts, new retrieval and data management programs, and thesaurus. Indexing systems should be basically simple, since non-specialists may have to use them; genus-species relationships, post-coordination of descriptors, documentation units, depth of documentation and selection of material are discussed. A thesaurus should be capable of development but growth should be controlled; the development of the Federal Military Library's thesaurus is described in detail.

0189

JONES, Kevin P. Problems associated with the use of compound words in thesauri, with special reference to BS 57 23:1979. J. Doc., 37(2):53-68, June 1981.

Although many large systems have bypassed the problem by using natural language, compound words remain a difficulty in thesaurus construction. Former attempts to devise rules which attempt to approach the problem via syntax were not altogether satisfactory. Proposes that the major criteria for handling compound words should rest upon their orthography, lexicography and semantics, with special attention to the possible occurrence of homographs (words of a common form but dif-

ferent meanings). Suggestions contained in British Standard 5723- 'Guidelines for the establishment and development of monolingual thesauri' are assessed in relation to these criteria. The standard is criticised for its insufficient attention to mechanised systems' requirements and partial failure in not recording the divergent needs of pre and post-coordinate systems.

JUTTNER, I. & BAUER, Gerd. Die anwendung des kategorienorientierten ordnungsprinzips in interdisziplinären wissenschaften und thesauren. (The application of a category-oriented ordering principle in interdisciplinary subject-fields and thesauri). Informatik, 25(5):29-31, 1978.

Nowadays most traditional fields of science are linked with one another. Linguistics, as a social science, is connected with other social and natural sciences, therefore many linguistic problems have to be considered from non-linguistic aspects. Conversely, other scientific fields have to be considered from linguistic aspects. This multi-dimensionality results in large and complex amounts of information, which must be well ordered for easy retrieval. This can be attained through using a multi-dimensional system of categories and derived facets, one such system being described in detail; the use of category oriented systems, more flexible than hierachic systems, is now standard practice for thesaurus compilation in the German Democratic Republic. Sometimes a combined application of category oriented and hierachic order can be the best solution.

0192

KABANTSEV, G. G. & KUZNETSOV, G. I. Ispol'zovanie otraspislevogo informat-sionno-poiskovogo tezaurusa dlya analiza i sinteza patentnykh dokumentov. (The use of a specialised information retrieval thesaurus for the analysis and synthesis of patent documents). Nauch.-Tekh. Inf., Ser. 2, 12:9-11, 1978.

To improve the information value of invention formulae in patent documents a method is presented of qualitative - quantitative analysis and synthesis of texts using a subject thesaurus. Analyses the initial text of an invention formula on mining technology. The final invention formula, which is more laconic and more general than initial one, is synthesised. Use of the suggested method in the editing of texts of patents and patent applications before their input into an automated information retrieval system increases the system's efficiency.

0200

KNAPP, Viktor. Alcuni problemi relativi alla costruzione di un thesaurus giuridico. Inform. e diritto, 5(1):175-97, 1979.

The author points to the salient characteristics of the lawyers language as a part of the natural language, which distinguishes it from an indexing language, i. e. an artificial language even if it is based on natural language. Most of pitfalls in handling natural language documents stem from the phenomena of polysemy, synonymy and homonymy, although the lawyers' language is characterised by a more precise and unambiguous use of terms. An experience in construction of a legal thesaurus in Czechoslovakia is reported. The main descriptors are grouped under

subject headings and followed by concepts which are logically associated with the main descriptor; a total of six kinds of association have been identified. The thesaurus embraces all the fields of law and is designed for processing not only Czechoslovak but also foreign legal documents prior to input into a computer-based information system.

KOBRIN, R. Yu. O printsipakh terminologicheskoi raboti pri sozdani<sup>u</sup> tezaurusov dlya informatsionno-poiskovikh sistem. (On the principles of terminology and thesaurus construction for information retrieval systems). Nauch.-Tekh. Inf., Ser. 2, 6:1-9, June 1979.

Principles of the construction of thesaurus glossaries are considered and the concept of 'model term', a grammatical term structure, showing the disposition and grammatical category of words and their relationships, is introduced. Models of grammatical structures are subdivided into 2 classes: models of language terms and models of speech terms. The class of grammatical language model terms is determined by the structure and norms of the language, not by extra-linguistic factors. It should therefore apply for terminology systems in any branch of science and technology.

LAUREILHE, Marie-Thérèse. Le thesaurus: son rôle, sa structure, son élaboration. 2. ed. Villeurbanne, Pres ses ENSB, 1981. 88 p.

Le thesaurus, outil fondamental en documentation surtout avec l'actuel développement des grandes banques internationales de données est présenté à partir des opérations clés nécessaires pour retrouver l'information: indexation des documents, recherche de ces documents. Plusieurs définitions du terme sont données selon sa fonction et sa structure. La structure du thesaurus est exposée, ses différentes parties: liste alphabétique structurée, liste de la hiérarchie, table alphabétique des descripteurs, listes particulières, index permué. On différencie les types de thesaurus du point de vue de la structure (thesaurus structure, à représentation graphique, thesauropacettes), du point de vue de la fonction (macro et microthesaurus, sectoriel, mono et multilingue, thématique). Les travaux sur la question: recensements, bibliographies, normes. Les méthodes d'élaboration de thesaurus sont évoquées: méthode analytique ou deductive, méthode synthétique ou inductive ainsi que des procédés permettant l'amélioration: apport de précision, simplification de la présentation. Dans le dernier chapitre test du thesaurus, maintenance, évaluation du temps de confection. Méthode d'utilisation niveau indexation et niveau recherche.

0213

LITOUKHIN, J. Toward an integrated thesaurus of the social sciences. Int. Classif., 7(2):56- 9, July 1980.

Introductory remarks concerning papers and deliberations of a meeting of the Unesco Division for the International Development of the Social Sciences, Paris, 9-11 June 80, intended to pave the way toward an Integrated Thesaurus of the Social Sciences. Developmental steps toward clarification of SS terminology had been undertaken at Unesco in 1952. Since then dictionary projects and attempts at concept identification have been undertaken, but the non-existence of an overall classification system of the SS identifying its scope and interrelationships has hampered the terminology work considerably. Proposals for valid methods were sought so that in 1981-83 a macrothesaurus/classification system for the SS could be worked out possibly based on an integration of existing thesauri and classification systems in these fields.

0214

LOHMANN, H. D. Több nyelvű osztályozási rendszerek kidolgozása és hasznosítása. (Construction and use of multilingual classification systems). Tudom. Musz. Tajek., 23(4): 165- 69, Apr. 1976.

The international exchange of scienc-

tific and technical information requires some methodical aids such as bilingual or multilingual thesauri for storing, retrieving and disseminating information processed in several countries. Methods of constructing multilingual thesauri are outlined as well as problems of equivalencies.

#### 0215

#### 0216

LOSCHNER, G. Rechercheorientierte weiterentwicklung eines industriezweig-thesaurus. (Search-oriented further development of a thesaurus for a branch of industry). Informatik, 23 (3):36-40, 1976.

General principles for compiling a thesaurus for a branch of industry are discussed, with particular reference to the second edition of a thesaurus of non-ferrous metals. A thesaurus compiler should always be mindful of the questions that users may ask of it. The terms of reference of each descriptor should be defined as precisely as possible. There should be a systematic structuring of descriptors in order to avoid inconsistencies and omissions in indexing. There should be a comprehensive formation of equivalence classes and care should be taken to avoid the use of excessive numbers of descriptors. The principle of pre-coordinated role indicators can be adapted for use in thesauri for other branches of industry.

#### 0217

LOUIS-GAVET, G. Attempt at thesaurus formalisation for any information system: practical application. Automatisme, 22(1-2):18-26, 1977. Em fran- ces.

The thesaurus formalisation method presented relies on the statistics of character distribution in natural language phrases. Any thesaurus word can be compressed to four characters by

using a character concentration function. This reduces thesaurus size, improves the organization of an information system and cuts down its running costs.

#### 0218

LOUIS-GAVET, G. A mathematical formulation of keyword compression for thesauri. Inform. Process. & Management, 13(3):189-200, 1977.

Demonstrates a new method for concentrating the set of keywords of a thesaurus. This method is based on a mathematical study carried out by the author into the distribution of characters in defined natural language. A function of concentration has been built which generates only a few synonyms. In applying this function to the set of keywords of a thesaurus, each keyword is reduced to 4 characters without synonymy. (For 3 characters there is a rate of synonymy of approx. 1/1000th). A new structure of binary files allows the thesaurus to be contained in a table of less than 700 bytes.

The information community, an alliance for progress: proceedings. White Plains, N.Y., Knowledge Industry Publications, 1981. v. 18, p. 324- 27.

The Modern Language Association of America (MLA) will implement a new classification and indexing system for the MLA International Bibliography effective with the 1981 volume. The Contextual Indexing and Faceted Taxonomic Access System (CIFT) utilizes a combination of controlled and free vocabu-

larries to describe documents in language, literature, and folklore. The system's controlled vocabulary will be drawn from the MLA Thesaurus of Linguistic, Literary, and Folkloric Terms which will be compiled in facets corresponding to those used in CIFT indexing. The thesaurus currently under development will function as an integral part of MLA's internal bibliographical system, while also providing both the print and online user with additional subject access to the 50, 000 citations produced annually. The CIFT indexing system is described as an introduction to the faceted organization of the Thesaurus. Thesaurus philosophy, organization, and functions are also discussed.

MITSUHASHI, H. Construction of a metallurgical thesaurus of the Iron and Steel Institute of Japan. Zyohokanri, Inform. & Doc., 18(12):975-87, 1976.

The thesaurus which is identical in structure to the JICST thesaurus and compatible with it has been a joint venture of 35 organizations and learned societies. It comprises 13 095 descriptors and 2 706 non-descriptors.

0228

MOLCHANNOVA, T. V. Vedinie informatsionno-poiskovykh tezaurusov. (Keeping information thesauri). Nauchno-Tekhnicheskaya Informatsiya, Ser. 2. 4:23-7, Apr. 1977.

Reviews the general principles of updating a thesaurus and the specific techniques employed by information retrieval systems or recommended in the literature. Changes to the lexical units of a thesaurus may involve additions, deletions, changing the status of a term, or substitution of one term for another. Also discusses changes to paradigmatic and syntactic relations and some special methods of correcting a thesaurus.

0229

MOLHOLT, Pat. Art and architecture thesaurus. In: AMERICAN SOCIETY FOR INFORMATION SCIENCE. Annual Meeting 44., Washington, 1981. The information community: an alliance for progress; proceedings. White Plains, N.Y., Knowledge Industry Publ., 1981. v. 18 p. 320- 23.

The need for a uniform set of terms for art and architecture has become apparent on the basis of considerable discussion with people in art and architecture-librarians, museum curators, historians, and indexers. Dora Crouch, Toni Peterson and Pat Molholt secured funding through the Council on Library Resources and the National Endowment for the Humanities to plan such a thesaurus.

Their report to the Council emphasizes the need to incorporate existing efforts in the construction of the AAT (Art and Architecture Thesaurus). Automation will play an integral part in the project, ranging from tele-conferencing between the three project directors and the advisory boards during production to simultaneous publication in print and machine - readable form.

0241

PETOIFI, János. Some aspects of a multi-purpose thesaurus. International Classification, 1(2):69-76, 1974.

Linguistic and documentation theoretical researches aim at developing a lexicon that contains a maximum amount of verbal and an optimum amount of encyclopaedic information. The study discusses the following questions concerning a lexicon that constitutes a component of a text theory: (a) the structure of the lexicon in general, (b) the structure of the elementary units of the lexicon, (c) the structure of the definitions in the lexicon, (d) the relations among the units of the lexicon, and (e) the employment of the lexicon in text processing. Since in the formal and content structure of this lexicon the various requirements of its applications have also been taken into consideration, this lexicon is capable of fulfilling all functions that a thesaurus must fulfil and thus it can be considered as a multi-purpose thesaurus.

0242

PIGUR, V. A. Lingvisticheskoe obespechenie postroeniya mnogoyazychnykh tezaurusov: podbor ekvivalentov. (Linguistic support in building up multilingual thesauri. Choice of equivalents). Naucho-Tech. Inform. Ser. 2, 11:11- 8, Nov. 1979.

In constructing multilingual thesauri a most difficult problem is the choice of equivalents for words which are partial synonyms. For this the main types of lexical systems and paradigmatical relations are considered and an example of a semantic description of terminal lexical systems in Russian and in English is given.

50

0243

PIGUR, V. A. & BARANOVA, O.B. Mnogoyazychnye tezaurusy; obzor metodicheskih dokumentov. (Multilingual thesauri: survey of documents on techniques of compilation). Nauch. - Tekh Inf., Ser. 2, 6:13- 8, 1976.

A method of constructing a multilingual thesaurus is described based on an analysis of 3 Unesco and 5 International Organization for Standardization publications on the subject. The method does not cover the humanities or social sciences. It is assumed that a suitable monolingual thesaurus exists which can be used as the base for the multilingual version. There are 4 stages:(1) analysis and translation of the base thesaurus; (2) production of the initial list of multilingual descriptors; (3) transfer of the logical and semantic relations from the base thesaurus to the multilingual list, at the same time indicating term equivalences - the result is a working version of the multilingual thesaurus which can be used for test indexing; (4) testing and analysis of the multilingual thesaurus and improving equivalences between descriptors in all languages. Absence of experience of updating procedures is noted.

ROBREDO, Jaime et alii. Construção de um núcleo de thesaurus em agricultura baseado no uso real dos descritores. In: REUNIÃO BRASILEIRA DE CIÉNCIA DA INFORMAÇÃO, 1., Rio de Janeiro, 1975. Anais. Rio de Janeiro, IBICT, 1978. v.1 p. 289-303.

Um problema bem conhecido dos sistemas mecanizados de recuperação da informação é a divergência que freqüentemente existe entre a linguagem usada para formular a pergunta e aquela usada para indexar os documentos incorporados ao sistema.

Muitos thesaurus pretendem resolver o problema multiplicando as relações hierárquicas e de associação entre os termos utilizados como descritores. No entanto, tais relações são, freqüentemente, o resultado de uma concepção acadêmica que nada tem a ver com a realidade das associações conceituais dos próprios especialistas.

Tendo como base alguns resultados interessantes já obtidos pelos autores em outra área, aplicou-se às Ciências Agrícolas uma metodologia de trabalho que permite estabelecer um núcleo expansível de thesaurus, no qual os termos se relacionam de acordo com as associações mais prováveis de uso por parte dos especialistas.

Preparam-se programas de computador os quais permitem obter-se listagens de freqüência de uso dos termos juntamente com as freqüências de associação entre os diferentes descritores. Estes programas que permitem definir o que chamou-se "meio ambiente da significação" dos descritores, ajudam a evidenciar certas associações entre termos, as quais são difíceis ou impossíveis de detectar-se a priori, apoiando - se apenas em conceitos acadêmicos de classificação; tais associações reais podem ser de grande valor no momento de recuperar-se a informação.

RODRIGUEZ DELGADO, Rafael. General systems theory and thesauri construction. In: ANNUAL CONFERENCE OF SOCIETY OF CLASSIFICATION, 3., Königstein, April 5-6, 1979. Klassifikation und Erkenntnis II. Proceedings der Vorträge der Sekt 2 und 3. (Classification and Cognition II. Proceedings of Papers of Sessions 2 and 3). Ed. by Ingertraut Dahlberg. Frankfurt, 1979. n.p.

Scientific concepts can be considered as models or "constructs" related to reality, but affected by "deformation indexes", whose values should be known. Concepts are organized in systems (nebtal structures) by classification criteria which depend on other concepts related to cultural contexts. It is proposed in this paper to apply General Systems Theory and Research to establish classification criteria of concepts elaborate a common metalanguage-or "megathesaurus"-to be used as a central core for macro and microthesauri interrelation. These ideas have been applied to the construction of a descriptors list for the Spanish Navy, as well as for a mechanized project of microthesaurus developed by the CEPIS (Panamerican Centre for Sanitary Engineering and Environmental Sciences) and for an educational thesaurus developed at CENDIE ( National Center of Documentation and Information for Education), both in Lima, Peru.

0259

RODRIGUEZ DELGADO, Rafael. Plan para la elaboración de tesauros coordinados en portugués y en español. Rev. Esp. Doc. Cient., 2(4):337- 55, 1979.

Mention is made of problems one may come up against in translating many English terms into the Romance, notably Spanish and Portuguese. Since the majority of STI materials in English and English language thesauri are by far the most widespread, English can

be accepted as the base language in developing multilingual thesauri in the natural and exact sciences. In the socio-economic and cultural-artistic fields, however, such a solution will hardly be practical, because many realia characteristic of particular countries and regions cannot be adequately rendered in any but the corresponding national languages. The affinity of the Spanish and Portuguese culture and the socio-economic, linguistic, cultural and historical propinquity of the Latin American nations emphasise the importance of developing a bilingual Spanish/Portuguese thesaurus which will reflect above all the realia of these two regions, but also general scientific terms. A provisional action plan for establishing a common set of indexing languages and information systems for Spain, Portugal and the Latin America is presented, which includes the following basic items: (1) to develop Spanish- and Portuguese-based common indexing languages which will rely on a macrothesaurus and specialised thesauri suitable for information interchange within automated or semi-automated networks; (2) to develop an information metalanguage (possibly based on FID's Broad System of Ordering) for exchange of multidisciplinary STI; (3) to provide for thesaurus compatibility by the use of numerical codes; (4) to develop a Spanish/Portuguese and Portuguese/Spanish automatic translation system which will handle at least the terminology covered by the thesauri. The organisational aspects of the action plan are outlined and its phases are formulated. Two Latin-American experiences in developing international thesauri are reported-in health (MISCA) and in education (CENDIE). Fragments of the two thesauri are presented.

#### 0260

RODRÍGUEZ DELGADO, Rafael. Teoría de sistemas y tesauros facetados. R. Esp. Doc. Cient., 1(3):213- 24, 1978.

If scientific ideas are according to general systems theory, the ambiguous concept of 'facet' can be considered as 'criterion for classification'. These criteria can facilitate information

processing and retrieval. Contains 3 brief examples of this approach in relation to physics, biology and economics.

The need for a definitive thesaurus of music has been recognised for many years and various steps have been taken towards a more comprehensive method of cataloguing musical content . The German Library Institute (Deutsche Bibliotheksinstitut (DSI) has been working on a thesaurus of music since 1978. One of the greatest difficulties in the preparation was deciding which criteria were necessary for indexing music titles. Work started by collec-

ting material and examining each title to see whether it contained certain concepts which referred to the content. These formed the empiric base for the thesaurus vocabulary. The thesaurus will contain 500-600 terms which will be the future preferred indexing terms. The project is not yet completed but is ready to be tested by the municipal music library in Munich in the framework of their cataloguing activity.

0271

SCHUCK, H. J. Linguistic aspects in the translation of thesauri. In: EUROPEAN CONGRESS ON INFORMATION SYSTEMS AND NETWORKS. 3., Luxembourg, 1977. Overcoming the language barrier. Proceedings. München, Verlag Dokumentation, 1977. v.1. p.447- 62.

A characteristic feature of such work is that the translation does not relate to isolated terms, as in a dictionary, but to terms arranged in equivalence classes or networks of relations. The status of the terms within a class or a network (descriptor, USE reference, broader term, narrower term) in two or more languages may differ; gaps, additions, and also artificial concepts may be required in the target thesaurus. This is due to the fact that the representation of relations between concepts and their terms-by definition an indispensable criterion of a thesaurus -is based on the thought and semantic structure of any given language. Translating a thesaurus, whether for collecting material or for use as a documentation language for indexing and retrieval, is not the optimum way of building up a multilingual system. The aim shoul be an a priori compilation of bilingual or multilingual thesauri in international working groups, during which the descriptors and their relations are simultaneously established in more than one language.

A technique for distribution of words among thesaurus subject headings on the basis of a correlation of semantic and formal parameters of words is suggested. For the formal feature, the word frequency is used. For the semantic feature of a word its ability of being a member of contextual pair according to the principles "interpretation", "graduation", "opposition", "specification", and "evaluation" is taken.

SHEKHTMAN, N. A. Sur un principe d'extension et d'approfondissement du thesaurus. Naucno-teh. inf. - vses. inst. naucn., teh. inf., Ser. 2, 7: 10- 2, 1981. Em russo.

0278

SIDORCENKO, V. D. Semanticeskarya struktura tezaurusa: sovremennoe sostoyanie i napravleniya ee sovershenstvovaniya. ( Semantic structure of a thesaurus: state of the art and development trends). Naucno - techn. inform., Ser. 2., 9:3-12, 1976.

A thesaurus is defined as consisting of: (1) a set of meaningful elements (vocabulary); (2) a connecting system of lexico-semantic relationships; (3) a conceptual system, characterised by breadth of subject coverage and fullness of vocabulary. The trends in thesauri are towards more precise concept representation more levels of hierarchy, the construction of systems connecting relationships, and wider coverage. The increase in computer storage capacity is seen as offering possibilities for the creation of new thesaurus structures.

SOKOLOV, A. V. The design principle of facet-block thesauri. Inform. jasyki. p. 222- 43, 290, 1975. Em russo.

Different thesauri are made compatible by a standard facet-block structure built into their semantic organization. A general-purpose list of facets and descriptor blocks is given.

0281

SOKOLOV, A. V. Ob adnom vozmozhnom podklode k obespecheniyu sooschestvosti IPT: universal naya tabula informacionnopoiskovykh tezaurusov. (A possible approach to ensuring IRS compatibility: universal "fable" for information thesauri). Naucno-techn. Inform., Ser.2, 1:19-24, 1979.

Examines the possibility of constructing compatible information retrieval thesauri by means of a set of categories based on a universal, subject-independent scheme of facets. Provi-

sion is made for special subfacets to allow for the migration of terms between subject fields. The scheme has been used to construct thesauri in various areas of engineering. A comparison with the ERIC (Educational Resources Information Center) Thesaurus is used to assess the scheme's universal applicability.

0282

SOKOLOV, A. V. Some problems in the type design of IR thesauri. Struktur i. Prikl. Lingv., 1:172-81, 1978. Em russo.

The type design should be such it allows for compatibility among different thesauri. An IR thesaurus "plot" is introduced to mean the scheme of facets and lexical blocks, representing the thesaurus contents.

0283

SOKOLOV, A. V. et alii. Opyt razrabotki sovmestimykh uzkotematicheskikh informatsionnopoiskovykh tezaurusov. (An experiment with the construction of compatible narrow subject field thesauri). Nauch.-Tekh. Inf., Series 2, 10:5-12, 1978.

The purpose of the study was to develop a methodology of the construction of compatible, narrow subject field thesauri for the projected automated scientific technical information system (ASTIS) at the Ministerstvo morskogo flota (Marine Ministry). As the emphasis was on compatibility an experiment was conducted into the use of facet-block type of information retrieval language (IRL). Its distinctive feature is the grouping of terms of mutually exclusive facets, blocks and sub-blocks. The system requires that general subject categories (i.e. those with interdisciplinary meaning) are identified and used as bases for the thesauri of narrow subject fields. Each individual interchangeable section can be transferred from one thesaurus to another. Experiments showed that the construction of compatible thesauri is feasible although the work cannot, at this stage, be considered completed. Outstanding problems are listed.

SPRINGL, W. Die Entwicklung eines mehrsprachigen Informations - Recherche-Thesaurus für das Fachgebiet Schwarmetallurgie. (The development of a multilingual IR thesaurus for ferrous metallurgy). Dok/Inform., 49:26-31, 1980.

Work is currently under way on a multilingual IR thesaurus within the framework of the INTERSTAL international information system, to which the GDR, Poland, the USSR, Yugoslavia and Czechoslovakia are making contributions. The terminological source is provided by a Russian language thesaurus in ferrous metallurgy which contains 18,000 lexical units. The thesaurus development project comprises several stages: 1) translation of terms from Russian into the national languages of the participating countries; 2) categorisation of the vocabulary; 3) structuring of concepts within categories; 4) thesaurus control and testing. The constitution of each stage and its current state of development are discussed. The first stage has been completed. Mention is made of some of the more serious problems (typically linguistic ones) which have had to be surmounted in carrying out the first stage. The categorisation of the vocabulary consists in assigning terms to particular categories and ordering them within their categories. So far, a term card index using A6 cards marked with category numbers has been compiled. Structuring within a category refers to the identification of paradigmatic relations between terms, identification of the head concept (descriptor) of a paradigmatic group, and the construction of a hierarchy of terms. The principal problem in the development of a multilingual thesaurus is to correlate the terms and paradigmatic groups among the different languages. It is

0229

MOLHOLT, Pat. Art and architecture thesaurus. In: AMERICAN SOCIETY FOR INFORMATION SCIENCE. Annual Meeting 44., Washington, 1981. The information community: an alliance for progress; proceedings. White Plains, N.Y., Knowledge Industry Publ., 1981. v. 18 p. 320- 23.

The need for a uniform set of terms for art and architecture has become apparent on the basis of considerable discussion with people in art and architecture-librarians, museum curators, historians, and indexers. Dora Crouch, Toni Peterson and Pat Molholt secured funding through the Council on Library Resources and the National Endowment for the Humanities to plan such a thesaurus.

Their report to the Council emphasizes the need to incorporate existing efforts in the construction of the AAT (Art and Architecture Thesaurus). Automation will play an integral part in the project, ranging from tele-conferencing between the three project directors and the advisory boards during production to simultaneous publication in print and machine - readable form.

0241

PETOIFI, János. Some aspects of a multi-purpose thesaurus. International Classification, 1(2):69-76, 1974.

Linguistic and documentation theoretical researches aim at developing a lexicon that contains a maximum amount of verbal and an optimum amount of encyclopaedic information. The study discusses the following questions concerning a lexicon that constitutes a component of a text theory: (a) the structure of the lexicon in general, (b) the structure of the elementary units of the lexicon, (c) the structure of the definitions in the lexicon, (d) the relations among the units of the lexicon, and (e) the employment of the lexicon in text processing. Since in the formal and content structure of this lexicon the various requirements of its applications have also been taken into consideration, this lexicon is capable of fulfilling all functions that a thesaurus must fulfil and thus it can be considered as a multi-purpose thesaurus.

0242

PIGUR, V. A. Lingvisticheskoe obespechenie postroeniya mnogoyazychnykh tezaurusov: podbor ekvivalentov. (Linguistic support in building up multilingual thesauri. Choice of equivalents). Naucno-Tech. Inform. Ser. 2, 11:11-8, Nov. 1979.

In constructing multilingual thesauri a most difficult problem is the choice of equivalents for words which are partial synonyms. For this the main types of lexical systems and paradigmatical relations are considered and an example of a semantic description of terminal lexical systems in Russian and in English is given.

0243

PIGUR, V. A. & BARANOVA, O.B. Mnogoyazychnye tezaurusy; obzor metodicheskikh dokumentov. (Multilingual thesauri: survey of documents on techniques of compilation). Nauch.-Tehn. Inf., Ser. 2, 6:13-8, 1976.

A method of constructing a multilingual thesaurus is described based on an analysis of 3 Unesco and 5 International Organization for Standardization publications on the subject. The method does not cover the humanities or social sciences. It is assumed that a suitable monolingual thesaurus exists which can be used as the base for the multilingual version. There are 4 stages: (1) analysis and translation of the base thesaurus; (2) production of the initial list of multilingual descriptors; (3) transfer of the logical and semantic relations from the base thesaurus to the multilingual list, at the same time indicating term equivalences - the result is a working version of the multilingual thesaurus which can be used for test indexing; (4) testing and analysis of the multilingual thesaurus and improving equivalences between descriptors in all languages. Absence of experience of updating procedures is noted.

ROBREDO, Jaime et alii. Construção de um núcleo de thesaurus em agricultura baseado no uso real dos descritores. In: REUNIÃO BRASILEIRA DE CIÉNCIA DA INFORMAÇÃO, 1., Rio de Janeiro, 1975. Anais. Rio de Janeiro, IBICT, 1978. v.1 p. 289-303.

Um problema bem conhecido dos sistemas mecanizados de recuperação da informação é a divergência que freqüentemente existe entre a linguagem usada para formular a pergunta e aquela usada para indexar os documentos incorporados ao sistema.

Muitos thesaurus pretendem resolver o problema multiplicando as relações hierárquicas e de associação entre os termos utilizados como descritores. No entanto, tais relações são, freqüentemente, o resultado de uma concepção acadêmica que nada tem a ver com a realidade das associações conceituais dos próprios especialistas.

Tendo como base alguns resultados interessantes já obtidos pelos autores em outra área, aplicou-se às Ciências Agrícolas uma metodologia de trabalho que permite estabelecer um núcleo expansível de thesaurus, no qual os termos se relacionam de acordo com as associações mais prováveis de uso por parte dos especialistas.

Preparam-se programas de computador os quais permitem obter-se listagens de frequência de uso dos termos juntamente com as freqüências de associação entre os diferentes descritores. Estes programas que permitem definir o que chamou-se "meio ambiente da significação" dos descritores, ajudam a evidenciar certas associações entre termos, as quais são difíceis ou impossíveis de detectar-se a priori, apoiando - se apenas em conceitos acadêmicos de classificação; tais associações reais podem ser de grande valor no momento de recuperar-se a informação.

RODRIGUEZ DELGADO, Rafael. General systems theory and thesauri construction. In: ANNUAL CONFERENCE OF SOCIETY OF CLASSIFICATION, 3., Konigstein, April 5-6, 1979. Klassification und Erkenntnis II. Proceedings der Vorträge der Sekt 2 und 3. (Classification and Cognition II. Proceedings of Papers of Sessions 2 and 3). Ed. by Ingertraut Dahlberg. Frankfurt, 1979. n.p.

Scientific concepts can be considered as models or "constructs" related to reality, but affected by "deformation indexes", whose values should be known. Concepts are organized in systems (nebtal structures) by classification criteria which depend on other concepts related to cultural contexts. It is proposed in this paper to apply General Systems Theory and Research to establish classification criteria of concepts elaborate a common metalanguage-or "megathesaurus"-to be used as a central core for macro and microthesauri interrelation. These ideas have been applied to the construction of a descriptors list for the Spanish Navy, as well as for a mechanized project of microthesaurus developed by the CEPIS (Panamerican Centre for Sanitary Engineering and Environmental Sciences) and for an educational thesaurus developed at CENDIE ( National Center of Documentation and Information for Education), both in Lima, Peru.

RODRIGUEZ DELGADO, Rafael. Plan para la elaboración de tesauros coordinados en portugués y en español. Rev. Esp. Doc. Cient., 2(4):337- 55, 1979.

Mention is made of problems one may come up against in translating many English terms into the Romance, notably Spanish and Portuguese. Since the majority of STI materials in English and English language thesauri are by far the most widespread, English can

be accepted as the base language in developing multilingual thesauri in the natural and exact sciences. In the socio-economic and cultural-artistic fields, however, such a solution will hardly be practical, because many realia characteristic of particular countries and regions cannot be adequately rendered in any but the corresponding national languages. The affinity of the Spanish and Portuguese culture and the socio-economic, linguistic, cultural and historical propinquity of the Latin American nations emphasise the importance of developing a bilingual Spanish/Portuguese thesaurus which will reflect above all the realia of these two regions, but also general scientific terms. A provisional action plan for establishing a common set of indexing languages and information systems for Spain, Portugal and the Latin America is presented, which includes the following basic items: (1) to develop Spanish- and Portuguese-based common indexing languages which will rely on a macrothesaurus and specialised thesauri suitable for information interchange within automated or semi-automated networks; (2) to develop an information metalanguage (possibly based on FID's Broad System of Ordering) for exchange of multidisciplinary STI; (3) to provide for thesaurus compatibility by the use of numerical codes; (4) to develop a Spanish/Portuguese and Portuguese/Spanish automatic translation system which will handle at least the terminology covered by the thesauri. The organisational aspects of the action plan are outlined and its phases are formulated. Two Latin-American experiences in developing international thesauri are reported-in health (MISCA) and in education (CENDIE). Fragments of the two thesauri are presented.

#### 0260

RODRÍGUEZ DELGADO, Rafael. Teoría de sistemas y tesauros facetados. R. Esp. Doc. Cient., 1(3):213- 24, 1978.

If scientific ideas are according to general systems theory, the ambiguous concept of 'facet' can be considered as 'criterion for classification'. These criteria can facilitate information

processing and retrieval. Contains 3 brief examples of this approach in relation to physics, biology and economics.

The need for a definitive thesaurus of music has been recognised for many years and various steps habe been taken towards a more comprehensive method of cataloguing musical content . The German Library Institute (Deutsche Bibliotheksinstiut (DSI) has been working on a thesaurus of music since 1978. One of the greatest difficulties in the preparation was deciding which criteria were necessary for indexing music titles. Work started by collec-

ting material and examining each title to see whether it contained certain concepts which referred to the content. These formed the empiric base for the thesaurus vocabulary. The thesaurus will contain 500-600 terms which will be the future preferred indexing terms. The project is not yet completed but is ready to be tested by the municipal music library in Munich in the framework of their cataloguing activity.

0271

SCHUCK, H. J. Linguistic aspects in the translation of thesauri. In: EUROPEAN CONGRESS ON INFORMATION SYSTEMS AND NETWORKS. 3., Luxembourg, 1977. Overcoming the language barrier. Proceedings. München, Verlag Dokumentation, 1977. v.1. p.447- 62.

A characteristic feature of such work is that the translation does not relate to isolated terms, as in a dictionary, but to terms arranged in equivalence classes or networks of relations. The status of the terms within a class or a network (descriptor, USE reference, broader term, narrower term) in two or more languages may differ; gaps, additions, and also artificial concepts may be required in the target thesaurus. This is due to the fact that the representation of relations between concepts and their terms-by definition an indispensable criterion of a thesaurus -is based on the thought and semantic structure of any given language. Translating a thesaurus, whether for collecting material or for use as a documentation language for indexing and retrieval, is not the optimum way of building up a multilingual system. The aim shoul be an a priori compilation of bilingual or multilingual thesauri in international working groups, during which the descriptors and their relations are simultaneously established in more than one language.

A technique for distribution of words among thesaurus subject headings on the basis of a correlation of semantic and formal parameters of words is suggested. For the formal feature, the word frequency is used. For the semantic feature of a word its ability of being a member of contextual pair according to the principles "interpretation", "graduation", "opposition", "specification", and "evaluation" is taken.

0277

SHEKHTMAN, N. A. Sur un principe d'extension et d'approfondissement du thesaurus. Naucno-teh. inf. - vses. inst. naucn., teh. inf., Ser. 2, 7: 10- 2, 1981. Em russo.

A thesaurus is defined as consisting of: (1) a set of meaningful elements (vocabulary); (2) a connecting system of lexico-semantic relationships; (3) a conceptual system, characterised by breadth of subject coverage and fullness of vocabulary. The trends in thesauri are towards more precise concept representation more levels of hierarchy, the construction of systems connecting relationships, and wider coverage. The increase in computer storage capacity is seen as offering possibilities for the creation of new thesaurus structures.

SOKOLOV, A. V. et alii. Opyt razrabotki sovmestimykh uzkotematiceskikh informatsionnopoiskovykh tezaurusov. (An experiment with the construction of compatible narrow subject field thesauri). Nauch.-Tekh. Inf., Series 2, 10:5-12, 1978.

The purpose of the study was to develop a methodology of the construction of compatible, narrow subject field thesauri for the projected automated scientific technical information system (ASTIS) at the Ministerstvo morskogo flota (Marine Ministry). As the emphasis was on compatibility an experiment was conducted into the use of facet-block type of information retrieval language (IRL). Its distinctive feature is the grouping of terms of mutually exclusive facets, blocks and sub-blocks. The system requires that general subject categories (i.e. those with interdisciplinary meaning) are identified and used as bases for the thesauri of narrow subject fields. Each individual interchangeable section can be transferred from one thesaurus to another. Experiments showed that the construction of compatible thesauri is feasible although the work cannot, at this stage, be considered completed. Outstanding problems are listed.

SPRINGL, W. Die Entwicklung eines mehrsprachigen Informations-Recherche-Thesaurus für das Fachgebiet Schwarmetallurgie. (The development of a multilingual IR thesaurus for ferrous metallurgy). Dok/Inform., 49:26-31, 1980.

Work is currently under way on a multilingual IR thesaurus within the framework of the INTERSTAL international information system, to which the GDR, Poland, the USSR, Yugoslavia and Czechoslovakia are making contributions. The terminological source is provided by a Russian language thesaurus in ferrous metallurgy which contains 18,000 lexical units. The thesaurus development project comprises several stages: 1) translation of terms from Russian into the national languages of the participating countries; 2) categorisation of the vocabulary; 3) structuring of concepts within categories; 4) thesaurus control and testing. The constitution of each stage and its current state of development are discussed. The first stage has been completed. Mention is made of some of the more serious problems (typically linguistic ones) which have had to be surmounted in carrying out the first stage. The categorisation of the vocabulary consists in assigning terms to particular categories and ordering them within their categories. So far, a term card index using A6 cards marked with category numbers has been compiled. Structuring within a category refers to the identification of paradigmatic relations between terms, identification of the head concept (descriptor) of a paradigmatic group, and the construction of a hierarchy of terms. The principal problem in the development of a multilingual thesaurus is to correlate the terms and paradigmatic groups among the different languages. It is

concluded that the construction of a bi-and multilingual IR thesaurus simply by translating an existing monolingual thesaurus is impracticable; constant cooperation between all the contributing countries is essential in the development of a multilingual thesaurus. Depth of structuring is governed by the language which has the fewest means of expression.

Thesauri for special fields are popular all over the world in all sections of industry because dictionaries are not sufficiently subject-oriented to explain trade peculiarities. It is especially important for Hungary and the other East European countries as the language differences are enormous. The preliminary work on the International Thesaurus for Building Matters began in 1969. A bilingual basic thesaurus was compiled in 1972 in German and Russian, containing 10,000 descriptors with 13 main subject divisions and 275 subdivisions. The other national thesauri were then compiled, coordinated indexing regulations were laid down, and the coding system was designed. The entries are in 2 parts: a 6-figure identification code number and a verbal description. The code is independent of language and searching can be carried out either on code or description.

TOMITA, Tetsuo & HATTORI, Kazutoshi.

Compilation of thesaurus and total index of "Nihon Kagaku-Gijutsu - Shi Kaikei" and analysis of its, documents. International Classification, 2(1):11-21, May 1975.

A thesaurus for the source books Nihon Kagaku-Gijutsu-Shi Taike (History of Science and Technology in Japan from 1850-1960) was compiled comprising 4819 Keywords. The characteristics of a thesaurus for historical documents were analyzed and names of persons, organizations, laws, geographical places, social tendencies, events and other proper names, as well as chronological data were found important and adopted as key words. Natural and single words were selected from the index of every volume (25 volumes, 32,243 words) and arranged both in a list of loosely grouped facets of classification and in a list according to the order of the Japanese syllabary. After compiling the total index by the thesaurus, 46277 documents were analyzed with the classified keywords. The analyzed distributions of keywords well explained the developments of science and engineering in modern Japan. Data on the contributions of polices, laws, administrative organizations, research institutes, universities, etc. for science, engineering and daily life including civil and medical activities are explained in figures and keyword-distribution graphs.

A revised edition of the 1973 OECD thesaurus of descriptors in the field of economic and social development is to be published in French, English and Spanish early in 1978. This involves deletions, corrections and up to 2,000 additions. Newly acquired data for computer entry have been recorded on punched cards. Consultation with specialised organisations has been necessary, and the work of revision has indicated that allowance must be made for unforeseen trends. Abstractors will continually consulted, and adaptations must be made to meet demands. It is increasingly important that a single body should manage the thesaurus, and that the multilingual thesaurus and other related thesauri should be recorded in computer-readable form to facilitate comparison and amendment.

ANTOPOL'SKII, A. B. et alii. Issledo-vanie metodov avtomaticheskogo poiska leksicheskikh peresechenii informatsiono-poiskovikh tezaurusov. (A study of automatic methods for the identification of lexical overlaps among information retrieval thesauri.) Nauchno-techn. inform. Ser 2, 2:14- 7, 1979.

The concept and types of lexical overlaps among information retrieval thesauri are examined. The following techniques of overlap identification are investigated: a search leading to word-form matches in thesauri lexical units, and a search leading to stem matches in automatically derived morphemes as well as statistical surrogates of varying length. Algorithms for morphemic and statistical analysis of lexical units are presented. The specific concept of relevance and, consequently, of recall and precision in searching for lexical overlaps is discussed, as well as the overlap multiplicity in different thesauri. It has been experimentally demonstrated that the pattern of the overlap multiplicity distribution curve does not depended on the power of the overlap identification techniques. Recall and precision ratios for the various search modes are given.

ARZIKULOV, Ch. A. et alii. An automatic system for thesaurus-aided annotating of scientific and technical documents. Naucno-techn. inform. Ser. 2., 12:12-20, 1978. Em russo.

Describes an experiment on the automatic generation of Russian abstracts of French scientific and technical documents. The 'Thesaurus aided abstracting of scientific and technical documents' (TAND) system is based on the use of an automatic dictionary and a thesaurus semantic network. 2 algorithms, previously established for automatic text processing, were further developed for the purpose. Entered into the computer they provide the basis for the development of an algorithmic user-computer dialogue which results in the computer generating an abstract.

ASKINAZI, L. G. & YAKOVLEV, O. E. Tezaurus i ego primenenie dlya poiska tekhniko-ekonomicheskikh potkazatelei v banke dannykh 'ACU-svyaz'. (The thesaurus and its application for retrieval of technical and economic data in MIS). Nauch.-Tekh. Inf., Ser. 2 2:23- 6, 1978.

The role of technical and economics data management information systems (MIS) is discussed. Principles of Keyword lists, descriptor vocabularies and thesauri and their role in information processing in MIS are outlined. The thesaurus is represented by a computer file of subjects and a computer file of attributes. 3 methods for the construction of these files are compared: REGIONAL 1, REGIONAL 3., and INDEXED. The thesaurus constructed with the aid of the INDEXED method takes up limited disc space and access time is acceptable. The INDEXED method is therefore chosen as most suitable for the automatic coding of descriptors representing technical and economic data in MIS.

BARNES, C. I. et alii. Automatic indexing using the SLC-II system. Inf. Process. Manage., 14(2):107-19, 1978.

Abstract- This paper presents an outline of the concepts and facilities of SLC-II, a basic support for R & D in automatic documentation and language translation, and gives a detailed description of its use in automatic indexing. The design and running of a full-scale pilot project on automatic indexing of INIS Atomindex material, done in cooperation with the IAEA and Inspec. will be described, as well as a parallel experiment in the effectiveness of "thesaurus enrichment" by semi-automatic means.

The SLC-II system aims to provide the user with a programming language using terms current in his application area, providing him with the maximum possibilities for linguistic analysis, in particular syntactic analysis, while removing from him the problems of data organization, dictionary access, program control and execution and input/output.

The first part of the experiment is designed to compare the effectiveness of automatic indexing with "manual" (or

"intellectual") indexing. In order to minimize the differences between an automatic and a manual system, the terms are chosen from a pre-existent thesaurus, namely the INIS Thesaurus. The data consists of 6 issues of INIS Atomindex. The main difference between the two systems is that the computer only "sees" the abstract while the indexer usually has access to the complete paper.

The second part of the experiment aims at comparing automatic indexing using a preexistent thesaurus as it stands, with automatic indexing using the same thesaurus "enriched". By enrichment we mean the augmentation of the thesaurus with terms selected from the texts being processed.

For practical reasons this part of the experiment was restricted to a single subject area, isotope separation. The test collection consists of material from ENDS.

The paper was originally presented at the Sixth Cranfield International Conference on Mechanized Information Storage and Retrieval Systems.

CEJPEK, Jirí. Od tezauru k metodě upíného textu. (From the thesaurus to the fulltext method). Ceskoslovenská Informatika, 20(9): 238-45, 1978.

The full-text method is described as one for automatic searching for particularly detailed information contained in large files of frequently used docu-

ments. The method should not be put in direct contrast with retrieval languages based on descriptors. The basic operations of the full-text method and the method using a thesaurus are compared. Both methods are evaluated from the point of view of the precision and completeness of the information output. Since future development points towards a higher degree of automation in full text information retrieval the variants of the full-text method are likely to be used more often. This method, however, cannot dispense with the linguistic issues connected with the construction and use of the thesaurus.

CHABRAN, Richard. Thesaurus considerations for a national Hispanic data base, a report. 1979 March 29. 33p. Ref. EDRS: ED 184 769.

Monographs, periodical literature, documents, unpublished reports, and non-print materials in both English and Spanish would be included in a proposed Hispanic data base built around an initial 15 contributing Collection totaling an estimated 100,000 items. Because users would employ indexing terms to access the data base, a thesaurus is essential for vocabulary control. Thesaurus guidelines are needed to control syntactical, semantic, and generic problems. The thesaurus, produced and updated by computer, would be organized in four sections: a principal alphabetical display of all terms supported by a rotated display, a hierarchical display, and a descriptor group display. Thesaurus updating, use, and personnel training should be managed in a manner similar to that of ERIC. Instead of creating an entirely new thesaurus or accepting should serve as a baseline document and certain areas should be developed in greater detail. A list of tasks leading to revision of the thesaurus is included, along with a bibliography.

CHAUMIER, G. & FOURTEAU, P. Le traitement des thesaurus à schémas fléchés par l'informatique graphique interactive. Documentaliste, 16(1):9-14, Jan./Feb. 1979.

Graphic representation, outdated by computer generation of thesauri may now be used for automated control of lists and diagrams. Arrow diagrams can be used to show relationships in a semantic field. Mini-computers can be employed to create, revise and store diagrams, using a visual unit capable of producing lines and reproducing designs rapidly on paper. Design is by juxtaposition of simple geometric shapes, a stylus being used on a paper grid to select the shape and its position. The result can be printed or stored on disc. L'Électricité de France used this system to construct and optimise its thesaurus. The system could be of benefit for compiling multilingual thesauri, indexing documents and formulating searches.

CIGÁNIK, Marek. Informačné systémy za ložené na spracovanie textových dát. (Information systems based on textual data processing). Knížnice a Vedecké Informácie, 9(4):149-57, 1977.

On the basis of cited references, the theory and methodology of facet thesauri are formulated. The content of any document is considered a thesaurus, if it can be formally described. Each thesaurus is connected with a regular method of document analysis-algorithms. A change in the thesaurus can be described as a process of learning. A thesaurus covers 3 levels-the richer its structure the more information it can process. A formal model of a thesaurus can be conceived with the help of 3 sets: the set of predicates, that of objects and that of events. The thesaurus can also be explained with the help of a set relational model or can be characterised as an applied predicate calculus. Semantic information theory is the principal theory for the modelling of social communication information. The theory of set entities as data structures and the accessing of data base systems is explained.

DEXTRE, S. G. & CLARK, T. M. A system for machine-aided thesaurus construction. Aslib proc. 33(3):102-12, Mar. 1981.

The British Standards Institute ROOT Thesaurus has been developed first of all as a comprehensive indexing and searching tool for technological applications and secondly as a labour-saving device in the construction of further thesauri. The classified section of the thesaurus was prepared first and input to the computer, where it is held in subject order, and from the subject file the alphabetical section was be possible to make use of the system developed and/or part of the existing subject schedules.

0337

DIETZE, Joachim. Die Einsatz der EDVA bei der Erarbeitung von thesauren. (The use of computers in thesaurus compilation). Informatik, 26 (4):16-9, 1979.

Using computers in thesaurus compilation involved combination of manual and mechanised processes, resulting in work intensification. A prerequisite for this method is the presence of relevant subject text material which is readable by computer or to be prepared for input; abstracts being particularly suitable. Tests described were made on Russian language abstracts. Computer-made lists of word forms were checked manually in order to determine the suitability of words as descriptors and modifiers. A stop list of unimportant, frequently used words was used to save computer time. The 3 principles involved were: (1) frequency statistics; (2) distribution; (3) word co-occurrence, involving the problems of word relati-

onships, balancing and cluster analysis.

Proceedings of Papers of Sessions 2 and 3). Ed. by Ingertraut Dahlberg. Frankfurt, 1979. p. 100- 24.

The German version of a multilingual oncological thesaurus was developed in German-French collaboration, financially supported by a project of the BMFT. Based upon the vocabulary of the CANCERNET Literature Information System, 5533 descriptors were used to construct a systematic part and an alphabetic registry, containing about 10,500 entry terms including 4900 synonyms or quasi-synonyms pointing to the corresponding descriptors. From the descriptors there is a pointer to the position(s) in the hierarchical systematic part of the thesaurus. The system is designed polyhierarchically as a tree structure, so descriptors can be listed below various broader terms. In addition to the alphabetic and systematic, part, a German-French dictionary was generated. All the information about each descriptor, i. e. key notation, synonyms and quasi-synonyms, the French term equivalent, and

the former German translation were, collected alphabetically into a "macrothesaurus". Also some routine programs were developed for the transformation of a hierarchical structure in an alphabetic registry and into the macrothesaurus.

ILJON, A. Creation of thesauri for EURONET. In: EUROPEAN CONGRESS ON INFORMATION SYSTEMS AND NETWORKS. 3, Luxembourg, 1977. Overcoming the language barrier, proceedings. München, Verlag Dokumentation, 1977 . vol. 1. p. 417-37.

The paper reports on the EEC thesaurus development efforts. It has been argued that the compilation of thesauri is unnecessary since most on-line retrieval software (e.g., STAIRS, DIALOG, RECON, etc.) permit free-text searching on all (or some) data fields of a record. Nevertheless, most organisations which produce data bases also index documents in some way with a controlled vocabulary. It is pointed out that on-line retrieval software packages designed solely for free (or full) text systems (for example, STAIRS) and those designed for indexing systems (for example, GOLEM) tend to develop in such a way as to accommodate both approaches: free text with an integrated thesaurus. However, neither free text searches nor the use of a monolingual controlled vocabulary solves the problem of access to bibliographic references in the different EEC languages, nor lends itself to improve cooperation between documentation centres in different parts of Europe, working in roughly the same fields. A "passive" knowledge of a foreign language will not always enable the documentalist to find the optimum strate-

gy for the formulation of his question, especially if the data base only has natural language (free text) search capabilities. The aim of EURONET is to promote cooperation in Europe and to facilitate access to scientific and technical information for the greatest number of European users. Provision has therefore been made within the framework of the EEC Action Plan for the development of suitable multilingual tools, including the compilation of standardised multilingual vocabularies, i. e. thesauri.

0354

ILJON, A. Le logiciel ASTUTE Automated System for Thesaurus Updating, Testing and Editing): un outil informatique pour la creation, la mise à jour, l'édition et l'impression de thesauri mono et multilingues. Documentaliste, 14(5-6):25-33, Sept./Dec. 1977.

ASTUTE, Automated System for Thesaurus Updating, Testing and Editing, was developed to produce multilingual thesauri for EURONET. It is a modular package, written in COBOL, usable on IBM 360-370 and Siemens 7740 computers. It can cope with 5 languages. Possible products are printed or photocomposed-thesauri, magnetic tapes, and working lists, all with various options. Details are given of the entry and correction of data, checking, production, translation, development of hierachic and related terms, trilingual structuring, printing and photocomposition. Procedures are demonstrated by reference to the compilation of 3 quadrilingual thesauri on agriculture, to be published in 1978. Because of the number of variables involved, processing costs and times are difficult to estimate. Correction proves to be a complex operation, and it is proposed that an interactive module be added to facilitate this.

0355

JASPERS, M. Development of a coded-concept thesaurus. Cah. Doc., 31 (2-3):103- 18, 1977. En fran鏘e.

Libraries and information units of Liège University use the technical resources of the Bureau d'Organisation Te

chnique to produce their thesauri, and have evolved an on-line system to incorporate modifications and additions. The thesauri are in the form of alphabetical lists of keywords and associations, with a numerical concept code. Details are given of the production of a thesaurus, and of the process for modification. Additions are facilitated by leaving gaps in the original recording. Appendices reproduce specimen extracts of thesauri, flow-diagrams of procedures, and an example of the on-line dialogue.

KAZLAUSKAS, E. J. & HOLT, T. D. Application of a minicomputer to thesaurus construction. Journal of American Society for Information Science, 31:363- 68, Sept. 1980.

The use of a minicomputer in various phases of creating the thesaurus for the National Information Center for Special Education Materials (NICSEM) database is described. The minicomputer is used to collect, edit, and correct candidate thesaurus terms. The use of the minicomputer eases the process of grouping terms into files of similar concepts and facilitates the generation of products useful in vocabulary review and in term structuring. Syndetic relations, indicated by assigning coded identification numbers, are altered easily in the design phase to reflect restructuring requirements. Because thesaurus terms are already in machine-readable form, it is simple to prepare print programs to provide permuted, alphabetic, hierarchical, and chart formatted term displays. Overall, the use of the minicomputer facilitates initial thesaurus entry deve-

lopment by reducing clerical effort, editorial staff decisions, and overall processing times.

LEONTYENA, N. N. et alii. Slovar' ent sikoledicheskikh funktsii i ego rol' v avtomaticheskem indeksirovani. (The phrase dictionary and its function in automatic indexing). Nauch.-Tekh. Inf., Ser. 2, 7:23- 9, 1978.

A system of automatic indexing based on materials processed by the 'Referat' information retrieval system is described. A phrase dictionary in which semantic relations between concepts within a given subject field are established in the form of phrases rather than single terms serves as the system's vocabulary. Describes the structure of this type of dictionary constructed for the 'eletrical measuring instruments' fields which was tested at the TSNIIITEI priborostroeniya Institute in 1970-72. The tests showed that a phrase dictionary of this type can be used in automatic indexing including automatic elimination of homonyms and semantic compression. A comparison of automated document search patterns with manual procedure showed that the quality was as good as in manual methods. The phrase dictionary is especially suited for use in data retrieval as well as for information retrieval.

LOBOVA, L. V. Main principles of building a linguistic software for large automated information retrieval systems for science and technology. In: FID. Congresso. 39., Universidade de Edinburgh, 1978. New trends in documentation and information: proceedings. Edited by Peter J. Taylor. London, Aslib, 1980. p. 234- 41.

The main aim in building a linguistics software for the Soviet information system is to unite information retrieval (IR) languages into a package which will save money since each document will be indexed once only. Describes the components of the software with particular reference to the rubricator. The nucleus will include basis thesauri and a macrothesaurus with standardised lexicosemantic intersections of basic thesauri. A classified index to the basic thesaurus should be built up by combining fragments from the rubricator with categorial subject headings. So far registration of IR thesauri has been begun and a pilot rubricator has been developed.

MARKEY, Karen et alii. An analysis of controlled vocabulary and free text search statements in online searches. Online Rev., 4(3):225-36, Sept. 1980.

Over 650 search traces from 18 different ERIC on-line searches using 3 different retrieval systems were analysed. 68% of searches use controlled vocabulary. The vocabulary in 165 free text search statements was analysed to determine whether ERIC descriptors and identifiers were incapable of representing these concepts. 6 categories of search concept which can only be expressed by free text are; geographic areas, recent topics, specific named objects (eg texts), value judgements, action statements and individual or psychological characteristics. On-line free text searches had higher recall and controlled vocabulary higher precision. On-line ERIC searches need new search aids.

0374

MAZUR, Zygmunt. Inverted file organization in the information retrieval system based on thesaurus with weights. Inf. Process. Manage., 15(5):227-34, 1979.

The inverted file structure is often used to organise data in an information retrieval system. When the hierarchical relations of the set descriptors and weights of descriptors in a document description are taken into account, the conventional concept of the inverted file can be extended. Studies properties and operations of inverted files which are used in a system based on a thesaurus with weights.

0375

MAZUR, Zygmunt. Properties of a model of information retrieval system based on thesaurus with weights. Inf. Process. Manage., 15(3):145-54, 1979.

Describes a model of an information retrieval system based on a thesaurus with weights. Defines the following: thesaurus, document description, information query, similarity of queries and descriptions of documents, similarity measure and accuracy of response. Discusses the system, particularly its inclusiveness.

0376

MEYER, E. & SENS, E. Transparente Programm-Dokumentation mit Hilfe des IDC-Thesaurus-Verfahrens. (Transparent program documentation by using the International documentation in chemistry thesaurus system). Nachr. für Dok., 27(1):7-12, Feb., 1976.

Computer programs are becoming more and more comprehensive and complex, resulting in ambiguity and error. With the computer's help it is possible to make hierarchic representations, reference lists and indexes with easily analysed structures in which alterations can be made without error. The progress of computer technology however, is dependent on program improvements. The IDC Thesaurus software, mainly financed by the Federal Ministry of Research and Technology, was developed for indexing the literature of chemistry but is flexible enough to use without alteration for other scientific fields. Each structural elements are clearly indicated. A detailed description of methods of use is included.

0377

MILDNER, Horst. Der internationale thesaurus für die Land-und forstwirtschaft. (The international thesaurus for agriculture and forestry). Informatik, 23(4):31-3, 1976.

An International Thesaurus on Agriculture and Forestry (ITAF) in Russian and German is being prepared by the automated information system for agriculture and forestry AGROINFORM, which is a branch information system within the International Information System. The activities are fundamentally guided by Normative Technical Regulation No. 3 of the (USSR) International Centre for Scientific and Technical Information, by the desire to achieve optimum search quality within a practical information system, and by necessary organisational materials, e.g. programmes, indexing regulations. Emphasis is on the consideration of lexical-semantic factors and the importance of Russian as the basic language. In its 1st edition ITAF will include approximately 5.000 terms.

0378

MILLER, Peter & ROBERTS, Mike. Let your keywords do the walking. Building, 237(39):59-60, 1979.

Describes an indexing system developed for the construction industry, and based on the Construction Industry Thesaurus (CIT). Keywords from the thesaurus are taken from a post-coordinate index on peek-a-boo cards. The thesaurus is searchable on-line using key words as a search base. Further information may be obtained from the CIT Agency, at the Polytechnic of the South Bank, London SW8.

NEUMANN-DUSCHA, I. & ULENBERG, G. The thesaurus of the European Brewery Convention. In: EUROPEAN CONGRESS ON INFORMATION SYSTEMS AND NETWORKS. 3. Luxembourg, 1977. Overcoming the language barrier: Proceedings. München, Verlag Dokumentation, 1977. v. 1. p. 439- 46.

A report is presented on a multilingual thesaurus which was compiled in two years by an eight-member working group. Two representatives each from English-speaking, German - speaking, French-speaking and Dutch-speaking are as decided in the course of 11 on-week meetings on the selection, translation and the relations of 3,150 descriptors.

The basic vocabulary came from lists of descriptors from four documentation centres. A computer was used to handle the vocabulary, to check the relations, and produce the printouts. Programs were specially developed for the computerised processing of the material. The thesaurus will appear in four sections, corresponding to the thesaurus languages. Each language section will contain the foreword, the rules for construction and use, instructions for the users, and examples of the structure. In the main part the descriptors for the source language in that section are in alphabetical order and occupy the first position in their systematic structure. Next to this there are three columns of translations into the other languages, these columns having the same structure. Similarly, a hierarchical index is printed which rounds off each section. Experience gained during work on the thesaurus is described. It is recommended that this experience be taken into consideration when similar projects are undertaken.

PAPOUSEK, Oldrich. Od haslárek vícejazyčnému tezauru v uhelném prumyslu. (From terminological dictionary to multilingual thesaurus in the coal industry). Ceskoslovenská Informatika, 19(9):245- 51, 1977.

In 1969 work began in the Branch Information Centre for the Coal Industry of the Ostrava-Karviná Mines in Ostrava on an automated, descriptor-based information system using an ICL 1905 computer. Documents were indexed on punched cards in 4 classes (matter, activities, abstract terms, proper names) and 9 categories. The result was an alphabetical index. A list of mining terms (in 8 groups containing 22,000 terms) was prepared, incorporating hierarchical relationships. This was com-

pared at the editing stage with the index. Initially, a distinction was made between the system thesaurus and the user's thesaurus. Since 1974 work on the international specialised information system 'Informugol' has been carried out and the Centre has prepared a 2nd version of the thesaurus designed to suit 5 languages. Descriptors, coding system and the system input on 80-column punched cards are described.

0384

PETERSEN, Toni. Computer-aided indexing in the arts: the case for a thesaurus of art terms. Art. Libraries Journal, 6(3):6-11, Autumn 1981.

Paper delivered to the Art Libraries Society of North America Conference, San Francisco, 22 Feb 81. Describes how subject indexing activities in art are being aided by the use of computers; notes the current state of disarray among art subject indexing systems; and suggests that the availability of a standardised vocabulary will provide an important adjunct to computerised indexing.

SALTON, Gerard. Automatic term class construction using relevance- a summary of work in automatic pseudoclassification. Inf. Process. Manag., 16 (1):1-15, 1980.

Term classifications and thesauri can be used for many purposes in automatic information retrieval. Normally a thesaurus is generated manually by subject experts. Alternatively, the associations between the terms can be obtained automatically by using the occurrence characteristics of the terms across the documents of a collection. A third possibility consists in taking into account user relevance assessments of certain documents with respect to certain queries in order to build term classes designed to retrieve the relevant documents and simultaneously to reject the nonrelevant documents. This last strategy, known as pseudoclassification, produces a user-dependent term classification. A number of pseudoclassification studies are summarized in the present report, and conclusions are reached concerning the effectiveness and feasibility of constructing term classifications based on human relevance assessments.

Recent interest in enhancing man-machine interaction in information retrieval systems has pointed out the necessity for increased sharing of information between user and computer in areas such as on-line searching. Techniques which are designed to maximize information sharing are characterized by the fact that they make use of data derived directly from the document collection. One machine based procedure which exploits information available from the data base is automatic term expansion generated by co-occurrence calculations and clustering algorithms.

0394

SEDELOW, S. Y. Automated language analysis, 1972-1973. Lawrence, Kansas, Univ. of Kansas, Depts. of Computer Science and Linguistics, 1974.

Report covers the following topics: the editing of Roget's International Thesaurus, the mathematical modelling of thesauri, and a user's guide to the VIA content analysis programs as implemented at the University of Kansas. Articles in the report are concerned with the practical and theoretical issues raised by the effort to edit the thesaurus.

0395

SEELBACH, H. E. Von der stichwortliste zum halbautomatisch kontrollierten wortschatz. (From the keyword list to the semi-automatically controlled vocabulary). Nachr. fur Dok, 28(4-5):159-64, Sept. 1977.

Indexing by the full text method results in an ever increasing number of search terms, which, although comprehensive, can be confusing and time-wasting. By rational intellectual processes the documentalist can transfer these terms semi-automatically into a controlled vocabulary, where phrases are left intact and not split into single words, preferred terms are substituted for rarely-used expressions and relationships are indicated. One such system, using a reference thesaurus, is described in detail, showing how to handle phrases, connected expressions, preferred terms and frequency relationships. The use of this method gives the documentalist a wider search area; his work will be quicker and the results more precise. This method originated in the 1960s; its history and various ways in which it has been used are described.

SEMTURS, F. Information retrieval from documents in multilingual textual data banks. In: EUROPEAN CONGRESS ON INFORMATION SYSTEMS AND NETWORKS. 3. Luxembourg, 1977. Overcoming the language barrier; proceedings. München, Verlag Dokumentation, 1977. p. 463- 67.

Considers the problems arising when the language in which a user questions a textual data bank differs from that of the data bank itself. Most can be solved by using a multilingual thesaurus in conjunction with routines intended to ensure that all possible linguistic variations (inflections) of the search keys are taken into account. It is possible, during retrieval, to expand the query automatically by including the thesaurus terms which are related to the search keys fed in. Subsequent generation of inflections allows the query to be further extended.

0403

WALL, R. A. Intelligent indexing and retrieval: a man-machine partnership. Inf. Process. Manage., 16(2): 73-90, 1980.

Suggests the designations of overlapping hierarchies in thesauri, first outlined in 1973, as a key element in progress toward a successful man-machine partnership. Postulates the use of UDC both as a matrix and a searching aid, although this is not essential. Suggests means of distinguishing overlapping terms from other related terms, to make possible the accurate representation of all hierarchical relationships. At its largest the result could be a 'Universal Reference Vocabulary', maintained only on-line and used to construct profiles before searching via natural languages and/or class numbers.

INVERNESS, M. S. Evaluation thesaurus. Pt. Reyes, Edgepress, 1980. 153 p.

Evaluation is a new discipline though an old practice. It is not just a science, though there is a point to talking about scientific evaluation by contrast with unsystematic or subjective evaluation. Disciplined evaluation occurs in scholarly book reviews, the Socratic dialogs, social criticism and in the opinions handed down by appellate courts. Its characteristics are the drive for a determination of merit, worth or value; the con-

trol of bias; the emphasis on sound logic, factual foundations and comprehensive coverage. That it has become a substantial subject is attested to by the size of this work and of the work to which the entries herein refer.

Information: Edgepress, Box 60, Reyes, California 94956, USA.

MANAGEMENT CONTENTS. Management contents data base thesaurus. 4ed. Northbrook, 1981. lv. (s.ed., 1978 ; s.ed. 1979).

0429

NATIONAL COMPUTING CENTER. Thesaurus of computing terms. 8 ed. Manchester, 1977. 310p. (s.ed., 1975).

This thesaurus is designed to provide a controlled structured vocabulary of terms in the form of descriptors (keywords) for indexing and retrieving information relating to computers and their applications. It consists of two interrelated sections: an alphabetical and a hierarchical listing. In the alphabetical listing; all terms are accompanied by cross-references to broader, narrower and related terms; the hierarchical listing shows the relationship between terms through the reducing level of each term and is followed by an index to the hierarchy for quick reference.

0430

NATIONAL TECHNICAL INFORMATION SERVICES. Computer science microthesaurus: a hierarchical list of indexing terms used by NTIS. Springfield, 1980. 69 p. (NTIS report. PB80-207814).

In a vocabulary information system, it is important to have controlled vocabulary for information retrieval. However, when searching the data base of the National Technical Information Service (NTIS) for computer science reports, one is faced with using search Keywords from 4 thesauri as well as free language terms. These keyword sources are: The Department of Defense thesaurus, Energy Research and Development Administration thesaurus, National Aeronautics and Space Adminis-

tration thesaurus, the thesaurus used by NTIS, and controlled free language terms. This microthesaurus integrated hierarchically the vocabulary of these 5 sources to allow easier retrieval for computer science terms. Generic relationships and thesaural origins are maintained for each. More than 800 main terms and their hierarchies are listed, expressing software, hardware, systems, and languages.

0431

ORGANIZAÇÃO INTERNACIONAL DE NORMALIZAÇÃO. ISO Thesaurus. Geneva, International Organization for standardization, 1977. 3v.

This thesaurus intended for use is connection with the world-wide network of standards ISONET. At the present time, the thesaurus is available in an English and a French version. With its 9,000 concepts, the thesaurus covers the entire spectrum of areas in which standardization operates, i.e. most industrial and economic activities: mechanical engineering, metallurgy, transportation, building, civil engineering, electrical engineering, nuclear energy, chemical and petrochemical industries, agriculture and foodstuffs, banking, units of measurement, optics, audio-visual equipment, documentation, data processing, medicine, surgery, etc. Its multi-branch nature makes it a tool for documentation centers and standardization services and a foundation on which to build up individual company thesauri. Each version (English and French) gives the equivalent terms in the other language. A table giving trilingual equivalences (English/French/Russian) is in preparation as are other language versions. The thesaurus has been prepared in accordance with rules on the preparation and presentation of thesauri (International Standard ISO 2788-1974, Guidelines for the establishment and development of monolingual thesauri). The volume titles of the English version are: 1) Structured alphabetical list English-French, 2) Bilingual English-French KWOC index, and 3) Correspondence table French-English. Sale of the thesaurus includes in addition to these three volumes, keeping the list

up-to-date for a period of two years . Volume 1 may be purchased separately. The thesaurus is also available on a COM microfiche.

VIET, Jean. Thesaurus: mass communication. Communication de masse. Comunicación de masas. Paris, Unesco, 1982. 356 p. (s.ed., 1975).

Produced for UNESCO on the initiative of the Division of Communication Research and Planning, this thesaurus is a documentation language devised for the purpose of analyzing works, articles, reports, and other documents relating to the problems of mass communication according to the particular medium to which they refer: books, the press, records, films, radio, or television. While its main purpose is to characterize the information in a sufficiently precise manner to allow post-storage retrieval of the documents containing it, it has the secondary purpose of enabling queries to be expressed in a form which will match the information available. The thesaurus is in two parts: Part 1 is a multilingual document containing English, French, and Spanish descriptors listed subject fields; Part 2 is an alphabetical list of descriptors in English.

CIÊNCIAS FÍSICAS  
PHYSICS SCIENCES

0441

BIBLIOGRAPHIC SYSTEMS & STANDARDS OFFICE. Physics thesaurus. London, The Britsh Library, Bibliographic Services Division, 1981. 46p.

This Thesaurus produced by BSO - the Bibliographic Systems & Standards Office extracted most terms cited from the British Library RIN File. These consisted, mainly, of terms used for the indexing of items for BNB, plus a proportion contributed by various British Library divisions/sections (such as, the Reference Division, British Education Index, BL Audiovisual Catalogue, etc.), as well as non-BL agencies (such as BUFC, ILEA, etc.). Contains about 1200 terms.

X 0442

CENTRE NATIONAL DE LA RECHERCHE SCIENTIFIQUE. Lexique U6: chimie pure et chimie appliquée. Paris, 1980. 99p.

Controlled list of descriptors used for indexing the documents of the PAS CAL file of the Documentation Centre of CNRS in the fields of pure and applied chemistry.

X 0443

CENTRE NATIONAL DE LA RECHERCHE SCIENTIFIQUE. Thésaurus génie chimique. Paris, 1977. 297 p.

COMISSÃO DAS COMUNIDADES EUROPEIAS. Agricultural economics and rural sociology: multilingual thesaurus . München, Saur Verlag, 1979. 5v.

The four versions have each an alphabetical main list of terms and several microthesauri at the end. The hierarchical levels are indicated with the broader and narrower terms, e.g. BT1, BT2, etc. The different language versions are brought together in the index which possesses 4 entry sorts according to one of the four languages. The microfiches show the same sorts in a different arrangement. There are 2 270 descriptors in each language, however the nondescriptors vary, namely 190 in German, 360 in English, 410 in Italian.

0482

COMISSÃO DAS COMUNIDADES EUROPEIAS. Food multilingual thesaurus. München, K.G. Saur Verlag, 1979. 5v.

The four versions have each an alphabetical main list of terms and several micro thesauri at the end as e.g. for countries, food, industries, microorganisms etc. The hierarchical levels are expressed in addition to the indication of broader and narrower terms by adding level numbers as e.g. BT1, BT2, etc. The different language versions are brought together in the index which possesses 4 entry sorts according to one of the four languages. The microfiches show the same sorts in a different arrangement. There are 3 458 descriptors in each language, however, the number of the non-descriptors varies according to language: there are 1 170 in German, 2 130 in English, 1950 in French and 1 200 in Italian.

0483

COMISSION DAS COMUNIDADES EUROPÉIAS.

Veterinary multilingual thesaurus.  
München, K.G. Saur Verlag, 1979.  
5v.

The four versions have each an alphabetical main list of terms and several micro thesauri at the end. The hierarchical levels are indicated with the broader and narrower terms, e.g. BT1, BT2 etc. The different language versions are brought together in the index which possesses 4 entry sorts according to one of the four languages. The microfiches show the same sorts in a different arrangement. There are 4922 descriptors in each language, however 2370 nondescriptors in German, 4190 in English, 2730 in French and 1830 in Italian.

PEREZ DOMINGUEZ, C. & LOPEZ GARCIA, J. R. Microthesaurus de términos agropecuarios. La Habana, Centro de Informacion Científica y Técnica, 1972. 422 p. (Agro - información, 15).

Este tesauro está dividido en tres secciones: I. Listado de términos por grupos temáticos. II. Tesauro de términos, incluyendo nombres científicos y referencias cruzadas. III. Índice de descriptores contenidos en el tesauro, en español, inglés y francés.

0498

TAKY, J. et alii. Canadian agricultural thesaurus; agricole canadien. Ottawa, Agriculture Canada, 1977 . 4 v. (s.ed. 1971).

Esta es la edición bilingüe inglés-francés, aumentada, revisada y corregida del Canadian Agricultural Thesaurus publicado en 1971. Contenido: Sección I, dos volúmenes: Generalidades ; Sección II: Sistemática (Plantas y virus); Sección III: Sistemática (Animales); Sección IV: Productos químicos.

0499

THESAURUS para indexação / recuperação da literatura agrícola brasileira. Rev. 2. Brasília, BINAGRI/SNIDA , 1978. 196 p. (Rev. 1, 1976, 481p.).

0500

UNIVERSITY OF READING. Agricultural Extension and Rural Development Centre. Thesaurus of terms for Agricultural extension and rural development and related subjects. rev. ed. Readings,GB, 1980. 73 p.

The Thesaurus contains many of the terms which occur in the literature of practices and development in the groups listed. It is intended for use in cataloguing the documents which are received by the Documentation Service under the ISS Punched Feature Subject Card System, and by the readers. In this respect, it is divided into a classified section and an alphabetical list.

The classified section contains terminology used in the alphabetical list. This is split into groups, each group covering a particular content i.e. Group A covers Geographical Countries and Regions; Group B couvers Bibliographical Form; Group C couvers Communications, Media and Organisations; Group D covers Agriculture, Forestry and Fishing; Group E covers Extension; Group F covers Family Planning, Health, Home and Family, Nutrition; Group G covers Society; Group H couvers Economy, Education, Management and Personnel; Group I covers Literacy; and Group J covers Research. The Alphabetical list includes a mention of the group in which each term can be found. This means that reference can

be made to provide relative terms and broad terms which can widen the reader's search.

0501

WILLIS, W. D. & WILLS, H. O. Thesaurus for tobacco. Bristol, 1980.  
15 p.

Thesaurus by way of indexing and retrieval of Brazilian agricultural literature. Contains about 20,000 descriptors in alphabetical order with Use, Use for, Broader term, Narrower term, and Related term references.

CHABRAN, Richard. Chicano thesaurus for indexing chicano materials. Santa Barbara, Univ. of CA, 1979. 92p.

Designed to provide subject access over other existing subject heading lists for literature related to the Chicano experience, the thesaurus is an initial attempt to remedy the absence of a baseline vocabulary for use in indexing and retrieving relevant materials from various information systems. Most of the approximately 700 entries are in English, although some are in Spanish. Terms contain 40 or less characters. Each entry is numbered with a unique "term identification number" which can be used for searching and indexing. The terms are organized into three separate segments. An alphabetical list includes all the terms in each hierarchy with cross references to scope notes and other terms. A permuted index displays on a rotating basis each keyword of a multi-word term, and brings together related terms which may be separated in the alphabetical segment. The hierarchical segment is an alphabetical array of all the broadest terms, each with its own array of narrower terms. An introduction explains the use of each segment. The first three letters of the first and last terms on each page of the alphabetical display are indicated in large print at the top of the page.

0567

HEALTH EDUCATION COUNCIL. Health education thesaurus. London, 1979. iv.

The thesaurus has been compiled with the particular needs of the Health Education Council library in mind, but it is hoped it will also be of use to Health Education Officers and others who are collecting materials in the field. The thesaurus is based on the "Thesaurus of Health Education Terminology" published in the USA. This version has been anglicized, simplified, modified. The modifications have been made to suit the needs of the HEC and to suit post-coordinate, optical coincidence, rather than pre-coordinate, computer indexing.

0568

HOYOUX, Philippe. La propension aux accidents: thesaurus et bibliographie. Quebec, Université du Québec, 1976. 116 p.

A mini-thesaurus and bibliography based on a study carried out by the Centre de Recherche en Sciences de la Santé, University of Quebec (Propension aux accidents: étude phénoménologique, 1976). The thesaurus consists of

250 descriptors grouped in eight fields: general; objective analysis of the accident; sociological situation of the injured person; his individual psychology; his social and industrial psychology; his psychology; methods and measures; analytical models. Descriptors are arranged within each field in diagrams with arrows indicating their hierarchical or parallel relationships. The bibliography is arranged alphabetically by author.

LUCAS, C. & OSBURN, M. Population/family planning thesaurus: an alphabetical and hierarchical display of terms drawn from population related literature in the social sciences. 2 ed. rev. Chapel Hill, Univ. of North Carolina, Carolina Population Center, 1978. 316 p.

This second edition of the Population/Family Planning (PEP) Thesaurus has been revised and updated as a subject search aid for the Carolina Population Center (CPC) Library's database, to be used in conjunction with the CPC Microcatalog, the CPC PopScan Service, or retrieval via an on-line information system. In addition, it is hoped that it will continue to fulfill the original mandate of the first edition: to help libraries and documentation centers, as well as individuals, establish their own manual or automated information retrieval systems for their population collections. The Thesaurus lists in alphabetical order 3,900 terms which are currently in use in population literature. In 1981 a Supplement has been published containing 77 new terms added to the Thesaurus since its second edition of 1978.

ORGANIZAÇÃO INTERNACIONAL DO TRABALHO. CIS thesaurus occupational safety and health. Geneva, 1976. 110 p.

Each of the two parts of the thesaurus contains all the index terms. In Pt. 1, the faceted thesaurus, descriptors are arranged in facets: (1) Occupational hazards, (2) Consequences of hazards, (3) Techniques employed in investigating, (4) Protective and remedial measures employed by these investigations, (5) place of occurrence. In Pt 2 descriptors are arranged alphabetically, labelled with a letter classification code.

0590

ORGANIZAÇÃO INTERNACIONAL DO TRABALHO.  
ILO thesaurus: labor, employment and training terminology. 2.ed. Geneva, 1978, Reimp. 1980. 223 p. (s. ed., 1974; s. ed., 1976).

Main part in systematic and faceted arrangement (semantic groupings of descriptors), preceded by a listing of Subject Category Fields. KWOC- indexes for each of the languages mentioned with an index entry for every meaningful word. After each entry term the correct descriptor and the appropriate facet number are given.

0590a

ORNA, E. Engineering industry training board thesaurus. Watford, Herts., Engineering Industry Training Board, 1978. 135 p.

The list of terms which the EITB information service uses for its mission oriented indexing in the fields of training, education, economics, employment, management industry and commerce.

0591

OKONOMISCHES FORSCHUNGSGESELLSCHAFT. Thesaurus ökonomie. (Thesaurus of economics). 2.ed. Berlin, 1973. 2 v.

0592

OLDSEN, C. F. et alii. Instructional materials thesaurus for special education. 2.ed. Arlington, Office of Education Bureau of Education for the Handicapped, 1974. 42 p.

Standard terminology for the indexing and retrieval of instructional material in the Special Education Instructional Materials Center / Regional Media Centers (IMC/RMC) Network, presented in three parts: alphabetical listing, rotated index and listing by category. The alphabetical listing provides definitions for all terms as well as scope notes.

0593

ORGANIZAÇÃO DAS NAÇÕES UNIDAS PARA O DESENVOLVIMENTO INDUSTRIAL. Thesaurus of industrial development terms. 3.ed. Viena, 1977. (s.ed., 1972; s. ed. 1976).

100

0594

RADULESCU, N. et alii. Thesaurus pädagogik. Suppl. 3; Fachwissenschaft im Unterricht. Teil Musik. Berlin; Padagogisches Zentrum, 1977. 53 p.

The thesaurus for music education and musicology is meant as a complement to the thesaurus for education.

SAWYER, Deborah C. Canadian Education Subject Headings (CanESH): subject headings for the Canadian Education Index: "The Key to CEI". Vedettes-matière sur l'éducation au Canada: Vedettes-matière pour le Répertoire Canadien sur l'éducation: "La Clef du RCE". 6.ed. Toronto, Canadian Education Association, 1979. 66 p.

While this list is still in its developmental infancy, it does represent an established contribution to Canadian

an bibliography. Its format may be described as modified Library of Congress. Users will find that subheadings are only listed under main headings when they are tied into the cross-reference structure; a full-list of subheadings is given at the end of the main list. French equivalents for main headings are given wherever possible. The cross-reference structure has been established to help lay users as much as bibliographic specialists.

The English edition of this thesaurus contains French and Spanish equivalents of the terms, arranged in a faceted order.

0606

VALK, Barbara G. HAPI: Thesaurus and name authority 1975-1977. Los Angeles, UCLA Latin American Center Publications, University of California, 1979. 113 p.

The HAPI Thesaurus and Name Authority contains in two sections all currently accepted access points to information appearing in the 1975, 1976, and 1977 volumes of the "Hispanic American Periodicals Index". The Thesaurus lists about 600 subject headings and cross references; the Name Authority lists personal and corporate names.

0607

VERNON, K. D. C. & LANG, V. The London classification of business studies: a classification and thesaurus for business libraries. 2.ed. London, Aslib, 1979. 253 p.

LCBS is the only classification scheme to have been compiled in this broad subject area since the second edition of the Harvard Classification of Business Studies was published in 1960. It differs from the Harvard Scheme in that it uses the principle of facet analysis as far as possible.

0608

VERNON, K. D. C. & NEWMAN, S. J. SCIMP/SCANP thesaurus 1980. London, London Business School Library, 1980. 124 p.

The SCIMP/SCANP Thesaurus covers the fields of business and management and is primarily an indexing tool for SCIMP and SCANP, but it is also intended for retrieving information online from the SCIMP/SCANP database held on the computer at the Helsinki School of Econo-

mics. The 1980 edition incorporates the supplement issued in July 1979 and also includes 186 new terms which have been added mainly as a result of suggestions made by the librarians of the 12 business schools of the European Business School Librarians Group who participate in the indexing work for SCIMP. Many more relationship terms have been added on the basis of a comparison with the 2nd edition of the London Classification of Business Studies and using the computer version of the SCANP thesaurus. The total is now nearly 6000 main and related terms. Available from: London Business School Library, Sussex Place, Regent's Park, London NW1, England.

The "European Documentation and Information System for Education" is concerned with educational documentation in the Council of Europe member states. The thesaurus is in two parts, a grouped and an alphabetical list of des-

criptors.

0614

VIET, Jean. International thesaurus of cultural development. Paris, UNESCO, 1980. 468 p.

This thesaurus endeavours to provide a language which can process information relating to all the aspects of economic and social development and at the same time, give a common dimension to the more specific vocabularies corresponding to each of them. Its aim is to offer in several widely spoken languages a common fund of terminology which has been duly tested in the practice of documentary analysis, in which adequate expression is given to the many approaches to development and in which the special vocabularies that translate them extensively find sufficient number of anchor points for an exchange of information among specialized agencies. The number of descriptors has almost doubled from one edition to the next.

- 0675  
 ENGINEERING INDEX. Subject headings for engineering - SHE 1972 including 1981 supplement. New York, 1980. 199 p.  
 SHE contains more than 12 000 authorized permutations of main headings and specifically assigned or allowable subheadings.
- 0676  
 ENGINEERS JOINT COUNCIL. Thesaurus of engineering and scientific terms (TEST); a list of engineering and related scientific terms and their relationships for use as a vocabulary reference in indexing and retrieving technical information. New York, 1969. 690 p.
- 0677  
 ENGINEERS JOINT COUNCIL. Vocabulário de termos de engenharia e de termos científicos; parte introdutoria. Uma lista de termos de engenharia e de termos científicos afins e suas relações, para ser usado como um vocabulário de referência na indexação e recuperação de informações técnicas. Trad. por Maria Alice Pompéia. São Paulo, Departamento de Aguas e Energia Elétrica, 1972. 51 p.
- 0678  
 ESCUELA TÉCNICA SUPERIOR DE INGENIEROS INDUSTRIALES. (Tarrasa). Departamento de Documentación. Thesaurus textil internacional. Ed. española. Tarrasa, 1971. 3v.
- 0679  
 EUA. Army Engineer Waterways Experiment Station. Microthesaurus of vehicle mobility, environment and pavement terms. Vicksburg, Miss, 1975. 135 p.
- The terms cover the three areas mentioned in the title as related to military research. Contains around 2000 main term entries.
- 0680  
 EUA. Army Engineer Waterways Experiment Station. WES microthesaurus of scientific and technical terms. Vicksburg, 1977. 602 p.  
 This microthesaurus lists in depth approximately 10,000 basic technical terms in the several fields which comprise the principal areas of interest of the US Army Engineer Waterways Experiment Station, arranged in the format prescribed by the Committee on Scientific and Technical Information displaying the hierarchical relationships among the terms. Certain nontechnical terms common to all subject areas in research and development are included to provide a complete vocabulary of concepts.
- 0681  
 EUA. Defense Documentation Center. DDC retrieval and indexing terminology posting terms with hierarchy and KWOC. 2.ed. Alexandria, Defense Documentation Center, 1979. 376p.  
 This Second Edition of the DDC Retrieval and Indexing Terminology (DRIT) - displays DDC's controlled Posting Term vocabulary. This vocabulary, supplemented by DDC- assigned identifiers and open-ended terms is used to index DDC's scientific and technical literature. It has been revised to exclude some 250,000 natural language Use References which are presently undergoing extensive revision.
- 0682  
 EUA. Department of Energy. Technical Information Center. Energy information data base: subject thesaurus. Oak Ridge, Tenn., 1979. 864 p.  
 The terminology of this thesaurus is used for the subject control of information announced in DOE Energy Research Abstracts, Energy Abstracts for Policy Analysis, Solar Energy Update, Geothermal Energy Update, Fossil Energy Update, Fusion Energy Update, and Energy Conservation Update. This termi

nology also facilitates subject search of the DOE technical energy information data base, a research in progress data base describing energy-related research, federal energy data index for statistical data, and a general and practical information data base on the DOE on-line retrieval system, RECON.

FRANÇA. Secretariat des Missions d'Urbanisme et d'Habitat. Centre de Documentation. Thesaurus. Paris , 1975. 2 v.

0685

GORKOVENKO, K. A. et alii. Thesaurus for nuclear science and technology. Lexico-semantic index, list of identifiers, reactors, accelerators. Moskva, Atomizdat, 1976. 272p. Em russo.

List of identifiers for the "Reactors. Nuclear-powered vessels. Accelerators" section. It supplements the lexico-semantic index to the Thesaurus for nuclear science and technology. The volume lists foreign and Soviet-made reactors, etc. The names are filed by the English alphabet. Descriptors for concrete installations are entered together with brief summaries indicating the unit's physico-technical characteristics and specifying the respective INIS code.

0686

GOSINTI. Information retrieval thesaurus for bread baking. Moskva, 1975. 287 p. Em russo.

Description of the bakery information retrieval thesaurus, used in the Kvantor IR system. It contains 3000 lexical units or 2600 descriptors and 400 keywords, arranged alphabetically with three supplementary indexes. In addition there is a list of linkwords and two indexes to it.

0687

GOSINTI. Information retrieval thesaurus for forestry and forest industry. Moskva, 1975. 225 p. Em russo.

Thesaurus comprises 2500 terms (2210 descriptors and 290 keywords). The descriptor entries are arranged alphabetically. Three indexes (classified, direct keyword and inverse keyword indexes) provide additional access.

0688

GOSINTI. Information retrieval thesaurus for railway transport. Moskva, 1975. 296 p. Em russo.

Lists alphabetically about 3000 terms in the railway transportation field and several allied fields. (2800 descriptors and 200 keywords). Three auxiliary indexes (classified, direct and reverse keyword indexes) help to provide access as well as a list of 'service keywords'.

0689

GRĀ-BRETANHA. Department of Environment. Construction industry thesaurus. 2.ed. London, CIT Agency. Polytechnic of the South Bank, 1975 . 419 p.

Terms are presented in two sections: an alphabetical listing and a classified display. The full version contains 14 000 terms, an abridged version (for f 9.-) contains only 2 500 terms. It is meant as a control vocabulary, a glossary of preferred terms and as a tool for classification study.

0690

GULL, C. D. et alii. Thesaurus for the national neighbourhood information exchange; Springfield, NTIS, 1979. 103 p.

Covers the physical, economic and social environment. Was prepared for the Department of Housing and Urban Development, Washington, DC.

0691

HÖVELBORN, P. et alii. Thesaurus Stadtplanung/raumordnung. Vol. 1: subject-oriented part, Vol. 2: Alphabetical part. 2.ed. Stuttgart Universität, Städtebauliches Institut , 1975. 417 p. (led., 1972). Vol. 1, organizes "wordfields" in 22 hierarchically divided groups.

KEMEROV. MEZHOTRASL. TERRITOR. CENTR.  
NAUCH.-TEHN. INFORM. I. PROPAGANDY.  
SEMIPALAT. FIL. DZHAMBUL. TECHNOL.  
INST. LEGK. PROM-STI. M-VO VYSSH.  
I SRED. SPEC. OBRAZUVANIJA. KAZSSR.  
Information retrieval thesaurus for  
the dairy industry. Moskva, 1976.  
333 p. Em russo.

The thesaurus contains 3800 entries  
of which 3400 are descriptors and 400  
keywords. Main part in alphabetical  
arrangement; a systematic, a direct  
and an inverted Keyword index facili-  
tate the access.

0701

KENCCHOVELI, M. S. et alii. Informa-  
tion retrieval thesaurus for the tea  
industry. Tiflis, Grus. NII NTI ,  
1973. 232 p. Em russo.

The thesaurus comprises 1 107 terms,  
of which 1020 are descriptors and 87  
keywords, arranged in (1) alphabetical  
sequence, (2) classified sequence and  
(3) a hierarchical relations index.

0702

LAPPIN, J. A. E. et alii. DTNSRDC li-  
brary subject thesaurus. Bethesda,  
David W. Taylor Naval Ship Research  
and Development Center, 1980. 763p.  
(NTIS report AD- A082 829).

David W. Taylor Naval Ship Research  
and Development Center Library Subject  
Thesaurus, which exists both as a prin-  
ted document and as an on-line compu-  
ter file, supports the indexing and  
retrieval functions of the library's  
automated storage and retrieval sys-  
tem. The hierarchical structure of the  
vocabulary permits generic retrieval.  
For example, a search on naval vessels  
will retrieve documents that had been  
indexed under all naval ship types.  
Several 'switching' relationships pro-  
vide an automatic cross-referencing ca-  
pability.

0703

MAL'CEVA, G. F. English-Russian the-  
saurus of descriptors for accelera-  
tor engineering and termonuclear  
plants. Parts I and II. Leningrad,  
1975-1976. 63+61 p.

A general alphabetical code list of  
English keywords and descriptors with  
Russian equivalents.

0704

MANN, E. J. IFIS thesaurus. Shinfie-  
ld, International Food Information  
Service, 1977. 1 v.

The thesaurus covers the descriptors  
and non-descriptors (lead-in-terms) u-

sed in the abstracting service Food Science and Technology Abstracts (FSTA) ever since its beginning.

0705

MOTOR INDUSTRY INFORMATION GROUP. Automotive engineering terms; a thesaurus. s.l., 1974. 40 p.

0706

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION. NASA thesaurus. Washington, 1976. 2 v.

0707

NATIONAL TECHNICAL INFORMATION SERVICE. Energy microthesaurus: a hierarchical list of indexing terms used by NTIS. Springfiled, 1976. 86 p.

0708

NAVAL SCIENTIFIC AND TECHNICAL INFORMATION CENTRE. Thesaurus of descriptors. 5.ed. St. Mary Cray, 1970 . 140 p.

0709

NEW YORK INSTITUTE OF TECHNOLOGY. Center for Energy Policy and Research . Thesaurus of descriptors for the vertical file system. Old Westbury , 1977. 40 p.

The thesaurus used for the NYIT Energy Information Center is presented. The center is a comprehensive information service covering every aspect of energy conservation and related technology, including conservation programs and practices, alternative energy systems, energy legislation, and public policy development in the United States and abroad. The Thesaurus includes all subject headings found in the Vertical File as well as other cross referenced terms likely to come to mind when seeking information on a specific energy area.

0710

NII INFORM. PO MASHINOSTROENIJIU. Information retrieval thesaurus in machine-tool and tool manufacture. Moskva, 1980. 224 p. Em russo.

0711

NOBBS, P. M. & VROOM, K. E. Thesaurus of pulps and paper terms. Pointe Claire, Pulp and Paper Research Institute of Canada, 1971. 426 p.

0724

ZARUBINA, A. A. Thesaurus for nuclear science and technology. Lexico-semantic index. Appendix 1. List of identifiers. Isotopes. Moskva, Atomizdat, 1976. 164 p. Em russo.

The volume is a list of identifiers for the Isotopes section; it supplements the lexico-semantic index to the Thesaurus for Nuclear Science and Technology. Isotopes are listed according to the Russian alphabet. Each isotope descriptor has a vocabulary entry which includes its nuclear-physics characteristics and its code adopted from the INIS Thesaurus.

BLEHOVÁ', Eva. Thesaurus descriptoru automatizovaného informočního systému zdravotnictví Bibliographia medica Čechoslovaca. (Descriptor thesaurus for the automated health information system Bibliographia medica Čechoslovaca). Zdrav. dok., 18(3-4):241-42, 1979. Em tcheco.

A thesaurus was compiled and printed in 1979 a limited edition in 1979 which is intended for computer-based production of Bibliographia medica Čechoslovaca. The thesaurus comprises 7,000 descriptors and is based on the 1977 Medical Subject Headings which are used in MEDLARS. Along with Czech-language descriptors their English equivalents are listed which makes the thesaurus a termological dictionary.

CHVOSTOV, N. N. Development of the medicine thesaurus: methodological problems. In: IV Vses. Konf. " Probl. razvitiya edinoj sistemy nauc.-techn. inform. v. strange". Moskva, 24-27 cent. 1974. Moskva, VINITI, 1974. 14 p. Em russo.

The All-Union Research Institut of Medical and Medical-Technological Information has developed Informatiion Retrieval Thesaurus for Medicine (1973) which is the basis of the IR language for the sectoral IR system. The thesaurus comprises 9500 descriptors and 2300 non-descriptors. It has the following structure: the subject authority list ( a part of the All-Union Information Classification), the alphabetic sequence, the classified sequence, which is represented by 12 descriptor fields built by facets (organisms, anatomic terms, diseases , etc.).

COMMUNITY information system thesaurus of index terms. In:AINLEY, P. Basics of community information: an action hand-book for librarians. London, 1980. p. 43-59.

0742

COSTA, Eunice R. Ribeiro. Thesaurus de vias urbanas. Revista Brasileira de Biblioteconomia e Documentação, 12(1-2):51-66, Jan./June 1979.

The thesaurus was constructed for use in the library of the University of São Paulo Faculty of Architecture and Urban Studies. In a full introduction, the treatment of terminology and the structural basis are discussed, with notes on the style of presentation. The thesaurus itself is given in full, in five sections: a hierarchical plan, alphabetical list of terms, systematic list of descriptors, hierarchical index of descriptors, and glossary.

0743

DAHLBERG, Ingetraut. The Broad systems of Ordering (BSO) as a basis for an integrated social sciences thesauri? Int. Classif., 7(2):66-72 , July 1980.

Investigation of the feasibility of using relevant parts of the BSO as the basis for an integrated thesaurus of the social sciences comprising all existing thesauri and classification systems in this area. BSO's coverage of the social sciences was found to be relatively small compared with the corresponding classes of the Dewey Decimal Classification, the Bliss Classification and the Unesco Thesaurus. BSO falls short in its structural features as exemplified by its method of class formation and concept arrangement with its reversing rule for citation order. BSO was not designed for the purpose of integrating other systems. It cannot therefore be blamed for its non-suitability for such an application.

In: CANADIAN CONFERENCE ON INFORMATION SCIENCE. 7., Banff, Alberta, 1979. Sharing resources-sharing costs: proceedings. Ottawa, Canadian Association for Information Science, 1979. p. 375-83.

A controlled indexing language has been developed at the Sainte Justine Hospital, Quebec, over 5 years. 2 languages were produced: one for the library and one for the resource centre. Recently these 2 languages have been merged to make a thesaurus. This project was funded by the Ministry of Social Affairs.

0747

DUTRA, Maria Riza Baptista et alii . O thesaurus experimental da constituição. Rev. Bibliotecon. Brasília, 5(1):203- 18, jan./ jun. 1977.

O montante e a diversidade das normas legais a serem implantadas no Sistema de Recuperação de Dados desenvolvido pelo PRODASEN e pela Subsecretaria de Análise do Senado Federal indicaram a necessidade de utilizar-se, para análise e posterior recuperação dessa legislação, um instrumento de controle de linguagem. Optou-se pela criação de um "THESAURUS". A inexistência de "THE SAURI" específicos para este campo e de pessoal treinado em sua estruturação determinou a execução de um Projeto Piloto, utilizando-se a Emenda Constitucional I de 1969, que abrange um universo amplo em informações, e possui uma estrutura interna definida. Assim, os processos, rotinas e documentação exigidos pelo trabalho resultaram em treinamento de pessoal, criação de um documento capaz de ser utili-

zado como paradigma, e, especialmente, adaptação do serviço ao "software" disponível.

0748

EL HADI, M. CAFRAD information retrieval system (CAFRADIRS) with particular emphasis on CAFRAD thesaurus of administrative information descriptors. In: OFFICIAL report of the African seminar for librarians and documentalists of administrative information services. 31 March - 7 April 1975. Achimota, Ghana Institute of Management and Public Administration, 1975. p. 211- 28.

CAFRADIRS users and optical coincidence card coordinate indexing system. The Thesaurus is the backbone of the entire system. Its objective, compilation and structure are described, together with the method of displaying descriptors, and the principles followed in choosing the form of descriptors. About 2,268 terms are contained in the preliminary English edition issued in Aug 73 and 70 have since been added. Briefly discusses retrieval methods.

0749

FOX, Nick et alii. The ERIC thesaurus: an analysis. Educ. Libr. Bull., 21(3):14-30, Autumn 1978.

This analysis of the ERIC thesaurus was carried out by 4 undergraduates (now graduates) of Liverpool Polytechnic's Department of Library and Information Studies as part of their assessed course work during their final year, (1977/78). The structure of the Thesaurus of ERIC descriptors is critically examined and comments are made on its descriptors, scope notes and multiword terms. 4 on-line searches in 3 other educational thesauri is compared with that in the ERIC thesaurus. One of the on-line searches was also carried out manually using British education index; the manual search took 24 minutes, compared with 3 minutes for the on-line search, but provided 7 additional references.

0750

GERD, A. S. et alii. Informatsionno-poiskovyj tezaurus po stalyam. (Information retrieval thesaurus on steels). Naukno-tehn. Inform., Ser. 2, 1:25- 6, 1977.

The information retrieval thesaurus for steel, constructed by the members of the Chair of Mathematical Linguistics of the Leningrad State University together with specialists in metallurgy, includes: an alphabetical list of descriptors, synonyms, etc.; an index of hierarchical relationships; definitions; and a permuted index of terms. It was constructed from a representative sample of materials on the production, processing, structure and use of steel. There are 2000 basic descriptors and 700 synonyms.

0751

GOLUBEVA, N. E. et alii. O tezauruse klassov organicheskikh soedinenij. (On the thesaurus of organic compounds classes). Nauchno-Tekhnicheskaya Informatsiya. Series 2, 5:6-8, May 1980. Em russo.

A thesaurus of organic compounds classes containing about 700 lexical units is compiled in the VINITI. It is formed with the lexical and semantic vocabulary of descriptors and non-descriptors, the systematic register of descriptors' generic and specific relationships and the list of structure fragments of organic compounds classes. To detect the cases of synonymy, generic, specific and associative relationships, as well as to joint lexical units within conventional equivalency groups, gross formulas of compounds' bonds were used as the codes of organic compounds classes.

0752

GRUNERT, M. et alii. Der "Zweisprachige informationsrecherchethesaurus chemie und chemische technologie" (russisch-deutsch: deutsch-russisch) - Struktur und erarbeitungsmethodik. (The structure and production methods of the bilingual information retrieval thesaurus on chemistry and chemical technology (Russian-German, German-Russian)). Informatik, 24(2): 27-9, 1977.

The thesaurus, published 1976, was produced jointly by the Soviet (VINITI) and East German (ZIID) central institutes for information and documentation, as part of the cooperation between COMECON countries in developing information on chemistry and chemical technology. It contains the most generally accepted chemical terms, selected on the basis of the subject index to the chemistry section of Referativnyi Zhurnal. The thesaurus contains about 2,500 terms, being fairly small since it was not produced by machine. The subject group structure is described in detail. The thesaurus is in 2 volumes, the list containing the Russian alphabetical and systematic lists, the 2nd, those in German. Each entry is followed by the equivalent term in the other language. The thesaurus will be tested in indexing and retrieval experiments; it is intended as a model for other bilingual thesauri.

HÖPKER, W. - W. Struktur und kompatibilität des Thesaurus der medizin. (Structure and compatibility of the Thesaurus of Medicine). Int. Classif., 3(2):81- 4, Nov. 1976

The medical thesaurus described is an international, compatible thesaurus in the German language the structure of which is based upon a hierarchical classification and a variable classification of facets. Both classification principles are shown by three digit letters and figures. The thesaurus is compatible with the Clinical Key of Diagnosis (KDS), the International Classification of Disease (E) (ICD/E),

and the Systematized Nomenclature of Pathology (SNOP). Its volume comprises 22,000 different terms.

MAUSBERG, W. A thesaurus for a parliamentary information system. In: IFIP Congress. New York, American Elsevier Publ. Co., 1974. vol 5. p. 1080- 84.

Report on the structure of a thesaurus for the legislative bodies of the Federal Republic of Germany and on the planned use of ADP for updating, maintaining and using for indexing and retrieving. Its starting base were

about 20 000 terms.

0762

MERILÄINEN, Outi. Pohjoismainen KDI-thesaurus. (A Nordic thesaurus for library and information science and documentation). Signum, 13(3): 70-2, 1980.

The work was started in 1977 by Nordic library schools and the Nordic Centre for Information and should be finished at the end of 1980. The thesaurus is in the 4 Nordic languages and includes 587 terms presented in a hierarchy. Out of these terms 519 refer to library and information science and 68 are closely related to it. An existing Norwegian thesaurus is being translated into the other Nordic languages. There are some difficulties in translating some of the terms into Finnish. The 1st edition of the thesaurus will not include many terms on library theory, but concentrates on library routines.

0763

MUSSO, V. & ZANGRANDO, R. The FIAT thesaurus: an experiment by a multi-national company. In: EUROPEAN CONGRESS ON INFORMATION SYSTEMS AND INFORMATION SYSTEMS AND NETWORKS 3. , Luxembourg, 1977. Overcoming the language barrier: proceedings. Munich, Verlag Dokumentation, 1977 . v.2, p. 57 - 70.

The Fiat Company's thesaurus comprises approximately 4,000 keywords- uniterms and polyterms selected during the scanning of documents of interest to the Company. The vocabulary is mainly in Italian, but other languages are also represented. The foreign terms adopted denote concepts which the Italian language does not yet cover. The vocabulary stood up well when used by persons whose mother tongue was not Italian. The instruction for use of the thesaurus, which differ for input and output, are the feature requiring most attention.

0765

NORRIS, C. MeSH- the subject heading approach. Aslib Proc., 33(4): 153-59, Apr. 1981.

MeSH is the thesaurus of 16,000 descriptors used in indexing the biomedical literature for Index Medicus and MEDLARS. MeSH is revised each year. It is published in two parts. The first lists the headings in alphabetical order and includes cross references from related terms as well as synonyms. The second part is a classified arrangement of the headings into hierarchies, called the MeSH Tree Structures. In the Tree Structures, the headings are allocated to one or more of 15 categories; within each category the headings are arranged hierarchically from the most general to the most specific. The coordinate indexing principles used in MEDLARS and the recommended search procedure using MeSH are described. Supporting methodological materials on MeSH application are listed and details are given of the basics of indexing of bacteria, viruses, invertebrates and vertebrates, and plants. Users of MEDLINE have the facility to use textwords appearing in the titles or abstracts of citations as well as MeSH headings for retrieval. One can use them separately or in combination to achieve the best effect.

SEKHNIASHVILI, N. G. et alii. O razrabitke informatsionnopoiskovogo tezaurusa po chainoi promyshlennosti . (The development of an information retrieval thesaurus for the tea industry). Nauch.-Tekh. Inf., Ser. 2, 11:26- 8, 1976.

The thesaurus described under construction at the Georgian Scientific Research Institute for Scientific and Technical Information-forms part of the automated information retrieval system for the tea industry which the Institute is establishing. The thesaurus represents the list stage in the whole system which will eventually contain another thesaurus on tea culture and a tri-lingual general thesaurus on tea. The thesaurus on the tea industry consists of 3 parts: alphabetical index of terms and a list of identifiers; subject index; index of hierarchical relationships. These are described and illustrated by examples. The thesaurus contains 1,696 terms- 1, 834 descriptors and 135 synonyms.

0777

SENF, W. IDC- Thesaurus and its reorganization. Bonn Bundesministerium für Forschung und Technologie, 1979. 69 p.

Final report on the West German Internationale Dokumentationsgesellschaft für Chemie IDC-Thesaurus and its reorganisation. The Thesaurus set up for documentation of chemistry and its borderline areas is built up of concept sets. These concept sets unite all synonyms are linked by concept relations, reflecting the hierarchical structure of the thesaurus.

WAGNER, J. et alii. Der Spezialthesaurus "Tenside". (The Tenside special thesaurus). Informatik, 25(6):22- 4, 1978.

The 1974 edition of Tenside, used as an information retrieval thesaurus, contains 2,000 terms from chemistry and the chemical industries, about 1,500 of which are descriptors. The thesaurus consists of: (1) an alphabetical section containing all subject terms with their synonyms, hierarchic and associated connections, with information on the treatment of modifying terms and composite words; (2) a classified section containing descriptors only, arranged according to a discipline-independent category system with subordinate facets. The main categories-objects, properties and processes-are relevant for all natural sciences. Within some facets descriptors are arranged hierarchically, or polyhierar-

chically if complex. There is an alteration and revision service. Further research is being done on non-descriptors, retrieval redundancy and losses and descriptor application frequency.

0786

WEBER, J. The thesaurus for city planning and regional structure. Inform. z. Raumentwicklyng 213:59-67, 1975.

Reorganization of the thesaurus mentioned into a 'corethesaurus', problems of indexing, updating and relations are treated.

0787

WUNSCH, G. Zur anwendung des Thesaurus als ordnungssystem für den bibliothekskatalog und das ausschnittarchiv. (Use of a thesaurus as an ordering system for the library catalogue and the newspaper clippings collection). Probl. Ges. Effektivität wiss. Inform., Kolloquium. Berlin/Warschau, 1975. p. 209- 16.

Description of a thesaurus developed at GDR's Institute of Foreign Politics and Economics. The alphabetical part includes 8755 terms of which 1873 are descriptors. The systematic part has a geographic and a subject section and a list of modifiers.

BIBLIOGRAFIAS  
BIBLIOGRAPHIES

0788

AA, H. J. Van Der. Thesaurus: bibliography. Amsterdam, Studiecentrum . NOV I, 1977. 86 p.

This bibliography of some 800 literature references in an attempt to bring together the widest possible range of data on the subject, in a wide range of languages. Topics including thesaurus construction, structure, applications and language problems are covered. The list is arranged alphabetically by author and there is a subject index.

0790

BIBLIOGRAPHY of United Nations thesauri, classifications, nomenclatures. Geneva, Inter-Organization Board for Information Systems, 1979. 252 p.

The objectives of this Bibliography are to provide: 1) a basis for coordinating the construction and use of indexing and classification tools which have application in the cross organizational activities of the United Nations family; 2) a basis for sharing knowledge and exchanging experience between organizations on what already exists by individual disciplines, languages, etc., so as to avoid unnecessary duplication of effort; 3) a source of United Nations family indexing and classification tools for those, particularly in recipient countries, who develop or use systems. It is intended for those concerned with the development of information systems both at national level and in the United Nations family.

GILBERT, V. List of thesauri and subject headings held in the Aslib library. Aslib Proc., 31(6):264- 74 , June, 1979.

Aslib Library holds a collection of thesauri, subject headings and classification schemes which are used to answer members enquiries about the existence of schemes for particular subject fields and many of which are available on loan for two weeks. Aslib's policy is to acquire all significant English language publications and bilingual or multilingual items which English as one of the languages. The present list contains some 150 entries and covers subject headings and thesauri published since 1970. It is arranged in classified order. A previous list gives details of holdings prior to 1971 and an Aslib Bibliography contains references to thesauri and to material on thesaurus construction.

POPE, Nolan F. et alii. Thesauri used by SLA documentation division members, 1977. 27 p.

This bibliography lists 115 citations for thesauri most frequently used by members of Special Libraries Association (SLA) Documentation Division. Entries are arranged alphabetically by author/corporate author, followed by title, imprint and/or alternate source of availability if known, date, pagination, and subject index terms assigned according to the 1975 edition of the Library of Congress Subject Headings. A subject/corporate author/initialism index is included to provide additional points of access.

0803

PORUGAL. Junta de Investigações Científicas do Ultramar. Centro de Documentação e Informação. Thesauri: relação bibliográfica, 1971 a 1975. Lisboa, 1977. v. 5.

Bibliography comprises 817 brief entries arranged according to the UDC.

0804

PORUGAL. Junta de Investigações Científicas do Ultramar. Centro de Documentação e Informação. Thesauri: relação bibliográfica, 1976-1978. Lisboa, 1980. v. 6.

0805

RIZZO, Stefano. Bibliografia internazionale di thesauri. Rome, Centro per la Documentazione Automatica, 1979. 64 p.

The bibliography informs documentalists and experts in documentation interested in thesaurus development and construction about the reference tools already in existence in their field of interest and in which languages: what practical guidelines and theoretical considerations can be of help to them; and which organizations, national and international, they may ask further suggestions and references. It describes thesauri as well as other terminological works compiled all over the world, although the main focus is on the European context. The bibliography is divided in two parts. The first part itemized approximately 300 thesauri and other related works, classing them under twenty general headings. Headings and subheadings have been chosen among the UDC classes with a few additional headings, and arranging everything alphabetically. Also added are a number of related terminological works. The second part is divided in a number of sections: I Cumulative and current bibliographies; II. National and international guidelines for thesaurus development and updating; III. Works on thesauri in general; IV. Main national and international centers and activities in the area of terminology, thesauri, bibliography and documentation; V, VI, and VII. A number of general works on related issues such as indexing classification,

library automation, information systems. With alphabetical name index.
